Lahontan Regional Water Quality Control Board

June 26, 2015

Additional Time: Proposed Cleanup and Abatement Order requiring Pacific Gas and Electric Company (PG&E) to cleanup discharges of chromium to groundwaters in Hinkley

I would like to thank the Hinkley community and the parties for participating in the Lahontan Regional Water Quality Control Board (Water Board) public workshop on May 28, 2015. Members of the Water Board, its advisory and prosecution teams, PG&E, the Independent Review Program manager, and members of the Hinkley community discussed six key policy issues where there was significant difference between the parties. The Water Board appreciates all of the good ideas and suggestions offered by all the participants at the Workshop.

At the public workshop, the Water Board encouraged parties to work together and develop alternative language for the Cleanup and Abatement Order (CAO) in consensus with other interested parties. A deadline of June 19, 2015 was provided. Since that time, the Water Board prosecution team has met with PG&E and reports that they have made progress in resolving some points of disagreement. Additional time was requested by the parties to prepare consensus language for the Water Board's consideration in the final CAO.

In consultation with the Water Board Chair, Kimberly Cox, I have agreed to provide until July 8, 2015 for parties to submit consensus language for the Water Board's consideration. This is not an additional comment period on the draft CAO, but rather an opportunity to work out issues in collaboration. The Water Board's advisors will provide a revised draft for the public's consideration in August, and a workshop on the new draft will be held at the September Board meeting in Barstow. After a comment period on the new draft CAO, the Water Board will plan to consider adoption of a final CAO at its November board meeting, which will also be held in Barstow. A final schedule, including the comment period on the revised draft, will be released with the revised draft in August.

Information regarding the proposed CAO can be found at:

http://www.waterboards.ca.gov/lahontan/water_issues/projects/pge/cao/index.shtml

Hinkley residents hit with latest property assessments

By Joe Nelson and Jim Steinberg, Staff Writers

sbsun.com

██████████ purchased a 6.4-acre plot of land near the base of Mount General, in the Mojave Desert town of Hinkley, for \$200,000 in 1993.

There, she began building her dream home, starting with a 2,700-square-foot house in 1993, followed by a 4,000-square-foot barn in 1997, a 4,000-square-foot detached garage and adjoining game room in 1999. And she recently had a \$30,000 wind turbine erected on her property to save on electric costs.

In all, ██████████ now 59, says she spent more than \$600,000 on her home.

In December 2010, the assessed value of the property was \$380,000. ██████████ still owed \$200,000. She had plenty of equity.

But last week, ██████████ received in the mail from the San Bernardino County Assessor's Office the new assessed value of her property under 1978's Proposition 8: \$38,135.

A property's assessed value is calculated by the assessor and then submitted to the county tax collector for the purpose of calculating tax bills. It is determined, with some discounts, using comparable home sales as a guide. In general the assessed value is less than the appraised value of a property.

The reason for the drastic decline in value: contaminated groundwater, an internationally known problem that spurred one of the biggest class action lawsuits in California history and was made famous by the 2000 film "Erin Brockovich."

Notification by the Assessor's Office last week manifested what residents in this small, tight-knit town roughly 10 miles west of Barstow had feared for years: the toxic groundwater plume caused by Pacific Gas & Electric had sacked property values and wiped out equity.

"We had equity. We don't know, and that's our biggest problem," said ██████████ who has been trying to work with her bank on a loan modification to get her monthly mortgage payments reduced. "Chase won't give us a loan at all. They won't even talk to us because it's Hinkley."

Proposition 8, companion legislation to 1978's Proposition 13, allowed for a reassessment of real property values in a declining real estate market. Proposition 13 limited taxes on real property to no more than 1 percent of the property's full cash value.

Assistant Assessor-Recorder Dan Harp said an influx of Hinkley property owners requesting reassessments of their properties this year prompted his office to be more proactive in their approach to the Hinkley situation. Staff from his office overlaid an updated map of the 7-mile long, 2-mile wide toxic plume onto an assessor's map of the area, then used GIS technology to extract the roughly 3,000 parcels of property located within and in close proximity to the plume.

From there, the properties were reassessed and the notices sent out.

Harp says there's a positive and a negative to the situation.

"It's a double-edged sword. On the one hand, paying those (lower) taxes would be a good thing, but the bad thing is you've lost that equity," Harp said.

██████████ and his family just returned to Hinkley last weekend after a vacation fishing in the backcountry of Idaho.

After opening the door he spotted the letter from the Assessor's Office.

Opening it, he said, took away all the refreshing benefits he accumulated in fishing the north fork of the Idaho's Clearwater River.

The Banks' large dream custom house nestled next to jagged rust-colored mountains had been assessed at \$58,000.

At one time, the four-bedroom, four-bathroom house had been appraised at \$380,000.

When ██████████ and his wife ██████████ purchased the property they felt it was so far away that the plume of chromium-6 groundwater contamination would never hit their property line. But it has.

"My \$300,000 in equity has just been wiped out," said ██████████ 45, a teacher in the Barstow Unified School District. "I will never recover from this."

Although the PG&E compressor station dominates one view from her backyard, ██████████ felt the 1,800-square-foot house she purchased on 2.5 acres would provide the rural lifestyle she was seeking.

As more test wells have been sunk, the known boundary of the plume has grown and now the Barstow first-grade teacher has a well which contains the cancer-causing chemical chromium-6.

She is also badly upside-down in her mortgage, still owing about \$200,000 on her house.

Her letter of reassessment from the county took the value of her house down to \$38,000.

"The only nice thing in the mess is that my mortgage payments will go down," ██████████ said, noting that tax payments were worked into the mortgage bill and with the drop in property valuation, there will be a slight reduction of the monthly bill.

██████████ built a custom house in Hinkley to be near friends he has known for decades. At one time the house and property were valued at \$660,000.

But with the recent notice from the county his 4,800-square-foot home doesn't quite make the \$60,000 dollar level.

"All my friends that I moved out here to be near are gone," ██████████ said.

██████████ saved the money to pay for the house outright before construction started. Now he can't even pull out \$20,000 for an equity loan because banks won't get involved with any Hinkley property.

██████████ and his wife ██████████ are hoping to have their property bought by PG&E.

"We want to get out of Hinkley and start down a new path in our lives," ██████████ said.

[via Certified Mail and email]
TO ALL PETITIONERS LISTED ON EXHIBIT A

Dear Sirs or Madams:

PETITIONS OF

FAILURE

TO ACT BY THE LAHONTAN REGIONAL WATER QUALITY CONTROL BOARD
CONCERNING AQUIFERS BENEATH THE TOWN OF HINKLEY, CA, POISONED WITH
ARSENIC AND/OR URANIUM), LAHONTAN WATER BOARD: NOTIFICATION OF
INCOMPLETE PETITION

This office has reviewed the above-referenced petition and determined that the petition is incomplete. (See Cal. Code Regs., tit. 23, § 2050.) To complete the petition, please submit a petition incorporating the following nine (9) elements:

- (1) Name, address, telephone number and email address (if available) of the petitioner.
- (2) The specific action or inaction of the regional board which the state board is requested to review and a copy of any order or resolution of the regional board which is referred to in the petition, if available. If the order or resolution of the regional board is not available, a statement shall be included giving the reason(s) for not including the order or resolution.
- (3) The date on which the regional board acted or refused to act or on which the regional board was requested to act.
- (4) A full and complete statement of the reasons the action or failure to act was inappropriate or improper.

FELICIA MARCUS, CHAIR | THOMAS HOWARD, EXECUTIVE DIRECTOR

1001 I Street, Sacramento, CA 95814 | Mailing Address: P.O. Box 100, Sacramento, Ca 95812-0100 | www.waterboards.ca.gov

APR 20 2015

- (5) The manner in which the petitioner is aggrieved.
- (6) The specific action by the state or regional board which petitioner requests.
- (7) A statement of points and authorities in support of legal issues raised in the petition, including citations to documents or the transcript of the regional board hearing where appropriate.
- (8) A statement that the petition has been sent to the appropriate regional board and to the discharger, if not the petitioner.
- (9) A statement that the substantive issues or objections raised in the petition were raised before the regional board, or an explanation of why the petitioner was not required or was unable to raise these substantive issues or objections before the regional board.

Additionally, you must provide a copy of your request(s) for action by the Lahontan Regional Water Quality Control Board (Lahontan Regional Board). If you have not requested that the Lahontan Regional Board take action, you must do so and allow the Lahontan Regional Board the opportunity to act before filing a petition in accordance with Water Code section 13320.

You may submit a petition within 20 days of the date of this letter that includes all of the required elements of a petition as well as any request(s) for action by the Lahontan Regional Board. (See Cal. Code Regs., tit. 23, § 2051.) If we do not receive a valid petition by 5:00 p.m. on the 20th day from the date of this letter, the petition will be deemed dismissed. If you do not have any request(s) for action submitted to the Lahontan Regional Board, this 20-day period in which to file a petition does not apply.

If you have any questions regarding this letter, please contact me at (916) 341-5178.

Sincerely,

Philip G. Wyels

Subject: Well Water Sample

Hello Ms. [REDACTED]

Juan and I are planning to visit Hinkley HOA (3600124) water system on Thursday, November 12th, at 10:30 a.m. for well water sampling collection. The water samples will be collected and analyzed for Arsenic, Chromium VI, and Uranium at no charge. I hope you can be there.

Thank you,

CASE NUMBER:

CIVDS1308429

**PROOF OF SERVICE BY MAIL
Substitution of Attorney—Civil**

Instructions: After having all parties served by mail with the Substitution of Attorney—Civil, have the person who mailed the document complete this Proof of Service by Mail. An unsigned copy of the Proof of Service by Mail should be completed and served with the document. Give the Substitution of Attorney—Civil and the completed Proof of Service by Mail to the clerk for filing. If you are representing yourself, someone else must mail these papers and sign the Proof of Service by Mail.

1. I am over the age of 18 and **not a party to this cause**. I am a resident of or employed in the county where the mailing occurred. My residence or business address is (specify):

[REDACTED]

2. I served the Substitution of Attorney—Civil by enclosing a true copy in a sealed envelope addressed to each person whose name and address is shown below and depositing the envelope in the United States mail with the postage fully prepaid.

(1) Date of mailing: November 9, 2015 (2) Place of mailing (city and state): Barstow, California

3. I declare under penalty of perjury under the laws of the State of California that the foregoing is true and correct.

Date: November 9, 2015

[REDACTED]

(TYPE OR PRINT NAME)

[REDACTED]

NAME AND ADDRESS OF EACH PERSON TO WHOM NOTICE WAS MAILED

4. a. Name of person served: Javier van Oordt, principal attorney, law offices of Callahan & Blaine

b. Address (number, street, city, and ZIP):

3 Hutton Centre Drive, Santa Ana, CA 92707

c. Name of person served:

d. Address (number, street, city, and ZIP):

e. Name of person served:

f. Address (number, street, city, and ZIP):

g. Name of person served:

h. Address (number, street, city, and ZIP):

i. Name of person served:

j. Address (number, street, city, and ZIP):

☐ List of names and addresses continued in attachment.

EXHIBIT “47”

Memorandum 2011-9

**Technical and Minor Substantive Corrections:
Statutory Cross-References to "Tort Claims Act"
(Draft Tentative Recommendation)**

In 1963, the Legislature enacted Division 3.6 of Title 1 of the Government Code, titled "Claims and Actions Against Public Entities and Public Employees" (hereafter, "Division 3.6"), on recommendation of the Commission. See 1963 Cal. Stat. chs. 1681, 1682, 1683, 1715; see also 1963 Cal. Stat. chs. 1684, 1805. Prior to the enactment of this legislation, which provided a comprehensive statute for civil liability applicable to public entities and employees in California, the civil liability landscape was governed by a confusing and inconsistent patchwork of rules. See Memorandum 2010-6, p. 5.

Over the years, Division 3.6 has been referred to as the "Tort Claims Act" in various statutes. However, the California Supreme Court has rejected this nomenclature and concluded that "Government Claims Act" is a more appropriate and inclusive short-title for the statute. *City of Stockton v. Superior Court*, 42 Cal. 4th 730, 741-42, 171 P.3d 20, 68 Cal. Rptr. 3d 295 (2007); see also Memorandum 2009-38, p. 38.

In light of this development, cross-references to the "Tort Claims Act" should be amended to ensure consistency with the Court's ruling. The staff has found six cross-references in need of amendment:

A draft of a tentative recommendation, including a narrative explanation and proposed legislation, is attached for the Commission's review. **The Commission needs to decide whether to approve the draft as a tentative recommendation (as is, or with revisions), for circulation for comment.**

In preparing this memorandum and the attached draft, the staff had assistance from Michael Lew, a 2010 graduate of University of Michigan Law

Any California Law Revision Commission document referred to in this memorandum can be obtained from the Commission. Recent materials can be downloaded from the Commission's website (www.clrc.ca.gov). Other materials can be obtained by contacting the Commission's staff, through the website or otherwise.

The Commission welcomes written comments at any time during its study process. Any comments received will be a part of the public record and may be considered at a public meeting.

School, who served as a volunteer law clerk for the Commission last fall. The staff is grateful for his help.

Respectfully submitted,

Barbara Gaal
Chief Deputy Counsel

EXHIBIT “48”

Complaint is against Patty Z. Kouyoumdjian, Executive Officer, Lahontan Regional Quality Control Board, hereinafter "State of California Employee"

WHEREAS, the named herein State of California Employee, has stated to several residents from Hinkley, California 92347, promulgated in a letter dated July 18, 2014, a true copy of which is marked as Exhibit "AA", attached hereto and incorporated herein for reference, the followings in quote marks:

"...the Hinkley community to reframe or revise the perception about the safety of drinking water in Hinkley because the level of chrome-6 in current residential wells are much lower (better) than the state's drinking water standards. I am hopeful that the citizens of Hinkley can dispel health concerns about their community, not live in fear, and no longer be stigmatized by the past. Property value will hopefully increase..."

"a well is only considered "affected" when the discharge causes the water to exceed a drinking water standard."

WHEREFORE, The People of this State, residing in Hinkley, California 92347 and/or owning real estate properties in Hinkley, California 92347 has risen and hereby complaint against this State of California Employee, as follows:

1. First and foremost, what kind of State of California Employee is this one, promulgating not only unsubstantiated and inconclusive statements that are not based on total and comprehensive investigation, based only on the discharger-polluter PG&E's representation.
2. Thus, it is alleged herein to reminiscent totalitarian regime, that favors corporate interest, concealment of the true facts (by aiding and abating), with utmost disregard of the true facts, that in the Town of Hinkley, water wells and monitoring wells exhibits substantial poisoning with Hexavalent Chromium, Arsenic, Radionuclides-Uranium and many other toxic substances.
3. To asserts that "a well is only considered "affected" when the discharge causes the water to exceed a drinking water standard, addressing only the "chrome-6" and avoiding to mention the Arsenic and the Radionuclides-Uranium, is hereby construed as concealment of facts. (For at least a year, said State of California Employee, has concurred that wells in Hinkley, California 92347, were also poisoned by PG&E with Arsenic and Radionuclides-Uranium, as a direct result thereof PG&E's In-Situ / Agricultural Operations).

THEREFORE, the People from the TOWN OF HINKLEY, respectfully demand that this State of California Employee not only rescind Exhibit "AA" in entirety, until all wells has proven not to contain over the regulatory limits Hexavalent Chromium, Arsenic and Radionuclides-Uranium, by virtue of tests, but be removed from office until such time.

The People of Hinkley, by the People and for the People, for the PUBLIC GOOD, are now testing their domestic wells and exhibiting over the regulatory limits drinking water contamination for Hexavalent Chromium over 10 ppb, for Arsenic over 10 ppb and for Radionuclides-Uranium over 20 pCi/L, of theirs and of the Real Estate Properties owned by PG&E in Hinkley, California 92347, via Monitoring Wells. Property value will not increase, on the contrary, not only will decrease to \$0, but inevitably, the TOWN OF HINKLEY will be the SUPERFUND TOWN, a ghost town.

Water board: Hinkley water safe to drink

HINKLEY — Twenty-one years after Erin Brockovich discovered the city's water contained high levels of hexavalent chromium (chromium-6), the Lahontan Regional Water Quality Control Board has told Hinkley residents their once-toxic water is now safe to drink.

Just don't expect them to believe it.

In a letter to three Hinkley residents dated July 18, Patty Z. Kouyoumdjian, executive officer of the Lahontan water board, informs them that California's new drinking water standard of 10 parts per billion for chromium-6 became effective July 1.

"Currently, all the domestic wells within Hinkley contain hexavalent chromium below the MCL (maximum containment level)," Kouyoumdjian wrote. "I believe this new standard poses an opportunity for the Hinkley community to reframe or revise the perceptions about the safety of drinking water in Hinkley because the levels of (chromium-6) in current residential wells are much lower than the state's drinking water standard."

One of the residents to whom the letter is addressed, rejects the notion that Hinkley's water is safe to drink.

"Poison is poison, regardless," said [REDACTED].

Another Hinkley resident, [REDACTED] agreed with [REDACTED].

"I think it's ridiculous," said [REDACTED] who has a whole-house filtration system from Pacific Gas & Electric, the company found liable for the contamination. She said she does not run her swamp cooler because she's afraid she will inhale chromium-6.

"It's just verbiage," [REDACTED] said. "They can't guarantee us anything. (The new standard) is too high. From what I understand, that's water for municipalities to clean up. We are rural. We are arguing chromium-6 is caused by PG&E and not natural."

Calls to Brockovich for comment were not returned on Friday.

Kouyoumdjian's letter said the new state standard for chromium-6 doesn't release PG&E from its obligation to clean up the discharges from the compressor station site that initially polluted the town's groundwater.

"The setting of the drinking water standard at 10 ppb does not, however, affect the water board's authorities requiring cleanup," she wrote.

The new state standard, however, does not allow Lahontan to order PG&E to continue to provide replacement water to Hinkley residents. According to Jeff Smith, spokesman for PG&E, 200 residents receive bottled water from PG&E and 40 households have the whole-house filtration systems.

"Because the MCL for chrome-6 is in effect, the Lahontan Regional Water Quality Control Board can no longer require replacement water for those domestic wells with levels of chrome-6 below 10 ppb," Kouyoumdjian wrote. "I realize this is frustrating because you believe the replacement water should be continued until the United States Geological Survey background study is completed; unfortunately, we have to comply with existing law, and have no authority to continue requiring the current replacement program."

Smith said PG&E has made no decision so far on providing bottled water and maintaining the filtration systems.

"Now that the state came forward with the 10 ppb is safe, we have tested 400 domestic wells and nobody has registered above that. Nobody in Hinkley is drinking water above the state standards," Smith said. "If any potential changes are made, PG&E will give significant notice."

Kouyoumdjian's letter ended with a hope that life for Hinkley residents will return to normal.

"I am hopeful that the citizens of Hinkley can dispel health concerns about their community, not live in fear, and no longer be stigmatized by the past. Property values will hopefully increase, and reflect this reality, and banks should no longer have any concerns about loaning money to Hinkley citizens based upon concerns about the safety of the levels of chrome-6 in domestic wells."

But [REDACTED] said she doesn't believe that will be possible anytime soon.

"We just received a letter from the bank. We wanted to refinance. But they wouldn't refinance due to the stigma," she said.

According to County of San Bernardino appraiser Michelle La Drew, normalcy in the real estate market will not return until sales are made.

"Mortgage companies will not loan money against that land," she said. "It's based on sales of the area."

EXHIBIT "50"

June 29, 2007

Via Electronic Mail

Dear [REDACTED]

Thank you for your participation in Pacific Gas and Electric Company's (PG&E) 2007 Renewables Portfolio Standard Solicitation. We received a strong response for this solicitation and are pleased to inform you that your ESE-I-1 project has been selected for the shortlist.

Per Section V.C of the RPS Solicitation Protocol, this notification triggers the five (5) business day window to submit an Offer Deposit of cash or letter of credit in the amount of \$3/kW of contract capacity. Based on your Offer of 14 MW, your Offer Deposit amount is \$42,000. Failure to submit this deposit by 5 p.m. on Monday, July 9, 2007, may result in your Offer being removed from the shortlist. Please notify Jack Foley of PG&E's Credit Department via email at JRFC@pge.com or call 415-973-0004 prior to submitting your Offer Deposit to obtain details of delivery instructions, and routing and account number requirements.

Per Section XIV of the RPS Solicitation Protocol, which covers requirements upon shortlisting, please provide the following by 5 p.m. on July 9, 2007. If you already submitted one or more of these with your original offer, you do not need to resubmit.

- Execute the form of Confidentiality Agreement, which is Exhibit 1 to Attachment A of the Solicitation Protocol
- Complete Appendix E: Credit and Financial Information of the Solicitation Protocol

Additionally, we request the following supplemental information and/or action by 5 p.m. on July 16, 2007. If you already submitted one or more of these with your original offer, you do not need to resubmit.

- A copy of a California Energy Commission pre-certification, or application for pre-certification as an Eligible Renewable Resource, or to the extent such application has not been made, a status of your plan for certification.

In addition to providing the Offer Deposit, return each of the items requested above by fax, mail or emailed PDF to:

Pacific Gas and Electric Company
Energy Supply Department
Attention: Angela Torr
245 Market Street, Room 1365A (MC N13R)
San Francisco, CA 94105
Fax: 415-973-6605
RenewableRFO@pge.com

We are shortlisting a sufficient number of projects to ensure that PG&E can meet its procurement target of 750 – 1500 GWh per year even if some negotiations do not conclude in executed contracts.

Please be advised that PG&E's decision to shortlist the Offer is in no way an acceptance of the terms and conditions proposed in the Offer. Once we receive the supplemental information requested above, we will be contacting you to schedule an initial meeting to begin the negotiation process.

Thank you for your hard work in submitting your Offer and responding to our follow-up information requests. We look forward to working with you. If you have any questions, you may contact me at 415-973-7114 or J6SW@pge.com. I will be out of the office from July 2 through July 6, so please email RenewableRFO@pge.com during that time and your questions and comments will be addressed by our team.

Regards,

Jim Shandalov
Project Manager
RPS Solicitations

**CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
LAHONTAN REGION
BOARD ORDER NO. R6V-2008-0014**

WDID NO. 6B369107001

GENERAL WASTE DISCHARGE REQUIREMENTS

FOR

**PACIFIC GAS AND ELECTRIC COMPANY
GENERAL SITE-WIDE GROUNDWATER REMEDIATION PROJECT**

San Bernardino County

The California Regional Water Quality Control Board, Lahontan Region (Lahontan Water Board), finds:

1. Discharger

Pacific Gas and Electric Company (PG&E) submitted a Report of Waste Discharge (RWD) to conduct a General Site-wide Remediation Project (Project) at the PG&E Compressor Station, located southeast of the community of Hinkley in San Bernardino County. The RWD consists of transmittals dated August 27, 2007 and September 19, 2007. PG&E proposes to implement various remediation projects to clean up chromium contamination in groundwater at different locations within and outside of the plume boundaries. For the purposes of this Order, PG&E is referred to as the "Discharger."

2. Facility

The compressor station began operating in 1952 and discharged untreated cooling tower water containing hexavalent chromium (Cr(VI)) to unlined ponds until 1964. Wastewater then percolated through soil to the water table, approximately 80 feet below, creating a chromium plume. The compressor station is located at 35863 Fairview Road (APN 0488-112-52) in Hinkley. Remediation activities are being planned throughout the entire plume area. The project area is approximately 2,000 acres and includes all areas within the chromium plume boundaries (according to the February 2007 groundwater monitoring event) and approximately 1,000 feet beyond the plume boundary (see Attachment A). The chromium plume extends generally north from the compressor station to the Desert View Dairy (north of Santa Fe Avenue) and west of Summerset Road to west of Mountain View Road. For the purposes of this Order, the project area including the

aquifer during groundwater recirculation and/or natural mixing. Coloration will dissipate to undetectable levels prior to reaching the Facility boundary. There are no established standards for fluorescent tracers, such as fluorescein or eosine. The Basin Plan, however, does require compliance with narrative objectives, which includes nuisance. Coloration of groundwater from the disposal of wastes would fall under the definition of "nuisance." Since groundwater outside the Facility boundaries is not expected to contain any color, there will be no adverse impacts to beneficial uses following the tracer test.

The use of acids and compounds to remove biofouling from screens in monitoring and extraction wells will alter pH in groundwater and increase the concentration of total organic carbon (TOC). Both effects, however, will be localized to the vicinity of the well screen due to the strong buffering capability of the aquifer. Baseline sampling shows that bicarbonate alkalinity averaged 300 milligrams per liter (mg/L) and pH is neutral to alkaline. These groundwater characteristics will confine acid and other reactions to the point of injection. Therefore, since groundwater pH will return to background conditions before reaching the Facility boundaries, there will be no adverse impacts to beneficial uses following the injection of well rehabilitation compounds.

Re-injection of groundwater extracted from outside the chromium plume boundaries may affect water quality near or within the plume boundaries with respect to total dissolved solids, nitrate, and sulfate. Potential degradation will not result in water quality standards being exceeded or increasing more than 25 percent above current concentrations for total dissolved solids, nitrates, and sulfates.

The extraction, ex-situ treatment, and in-situ treatment processes are designed to be the equivalent of the Best Practicable Technologies, as required by the State Water Board's Resolution No. 68-16. In addition, reagent injection will be calculated to be the lowest dosage possible for creating anaerobic reducing conditions and will likely minimize the likelihood of creating conditions that could produce potential by-products. The long-term benefit of the project will result in removal of chromium from groundwater. Therefore, the resulting water quality from this project will be consistent with the State Water Board's Resolution No. 68-16.

21. Constituents of Concern

The Constituents of Concern (COCs) consist of total chromium (Cr(T)) and hexavalent chromium (Cr(VI)). Potential constituents of concern include reagents to be analyzed as volatile fatty acids (lactic acid, acetate, pyruvate, propionate, and butyrate), and naturally-occurring reducible metals, such as arsenic, manganese, and iron. In addition, other potential constituents of

D. Expiration

These general waste discharge requirements do not expire.

I, Harold J. Singer, Executive Officer, do hereby certify that the foregoing is a full, true, and correct copy of an Order adopted by the California Regional Water Quality Control Board, Lahontan Region, on April 9, 2008:

INVESTIGATIVE ORDER NO. R6V-2011-0105, REQUEST FOR INFORMATION ON LABORATORY QUALITY CONTROL DATA FOR 2007 GROUNDWATER BACKGROUND STUDY REPORT, PACIFIC GAS AND ELECTRIC COMPANY (PG&E), HINKLEY COMPRESSOR STATION, SAN BERNARDINO COUNTY

This Investigative Order requires PG&E to submit a technical report concerning quality control procedures associated with groundwater sample analyses conducted by Emax Laboratories and Truesdail Laboratories, contracted by PG&E for its 2007 Groundwater Background Study Report. This investigative order is issued pursuant to California Water Code section 13267.

Background

In response to direction by the Lahontan Water Board, PG&E's *2007 Groundwater Background Study Report, Hinkley Compressor Station, Hinkley, California* (hereafter, the 2007 Background Study Report) underwent scientific peer review in the summer of 2011. As a result of that peer review, quality control issues were identified related to the procedures used by Emax Laboratories and Truesdail Laboratories, the two chemistry laboratories that analyzed groundwater samples from the Hinkley Valley for the 2007 Background Study Report. The peer reviewer expressed doubt regarding the validity of the data from the labs due to certain quality control procedural irregularities.

Requirement

Pursuant to section 13267 of the Water Code, PG&E is hereby required to submit a technical report to the Water Board by **January 20, 2012** that includes the following items. Responses should include information for all samples analyzed for the 2007 Background Study Report:

- 1) For the continuing calibration verification (CCV) failures for EPA Method SW 7199, discuss what percentage out of range were the CCV recoveries.
- 2) Provide raw data, including calibration curves, CCVs, and quality control (QC) samples, from hexavalent chromium analysis.

California Environmental Protection Agency

- 3) Provide information on matrix spike amounts and recoveries for hexavalent chromium.
- 4) A description of how samples were chosen for matrix spiking.
- 5) Provide evidence that Mid-Range Calibration Check Standards (MRCCSs) were prepared from a second source standard. Provide NIST (National Institutes of Standards Traceability) documentation for MRCCSs.
- 6) Verify which calibration curve was used for EPA Method 6010B (was the standard or low level calibration curve used?). Provide documentation showing calibration curve.
- 7) Provide valid Environmental Laboratory Accreditation Program certificates for each lab for total and hexavalent chromium analysis for the calendar year 2006.
- 8) Discuss why EPA Method 6800 was not used for chromium species identification.
- 9) Discuss why EPA Method 6020A was used instead of Method 6010 for total chromium.

The technical report required by this Investigative Order is necessary to determine whether the analytical data from the laboratories in question is valid and reliable for determining background chromium concentrations in the Hinkley Valley. The need for this information outweighs the burden on PG&E to produce the information it already possesses, including the costs to produce the technical reports.

Any failure to furnish the required technical or monitoring reports subjects PG&E up to \$1,000 a day in administrative civil liability for each violation pursuant to Water Code section 13268.

Please contact me at 530-542-5436, or Anne Holden at 530-542-5450 if you have any questions.

Subject: Investigative Order No. R6V-2011-0105, Request For Information On
Laboratory Quality Control Data For 2007 Background Study Report,
Pacific Gas And Electric Company, Hinkley Compressor Station, San
Bernadino County

Dear Ms. Kemper and Ms. Dernbach:

Pacific Gas and Electric Company (PG&E) respectfully submits the enclosed Technical Memorandum, which presents the response to Investigative Order No. R6V-2011-0105, issued by the Regional Water Quality Control Board, Lahontan Region (Water Board) on December 29, 2011. This Order requested responses to nine specific comments related to laboratory quality control data for Hinkley Groundwater Background Study Report (CH2M Hill, 2007) and requested submittal of the raw analytical data, which is provided on a compact disc (CD). In addition, the Technical Memorandum presents responses to comments provided by Dr. Stuart Nagourney in the Peer Review received by the Water Board on October 14, 2011.

Please contact me if you have questions regarding the information provided in the enclosed Technical Memorandum.

Sincerely,

Kevin Sullivan
Hinkley Remediation Project Manager

Technical Memorandum – Response to Investigative Order No. R6V-2011-0105 and Peer Review Comments on Laboratory Quality Control Data for 2007 Groundwater Background Study Report, Hinkley Remediation Project

Compact Disc (CD) – Hexavalent Chromium Analytical Data, Truesdail Laboratories, Inc. and EMAX Laboratories, Hinkley Groundwater Background Study (CH2M HILL, 2007)

Response to Investigative Order No. R6V-2011-0105 and Peer Review Comments on Laboratory Quality Control Data for 2007 Groundwater Background Study Report, Hinkley Remediation Project

PREPARED FOR: Pacific Gas and Electric Company

COPY TO:

PREPARED BY: CH2M HILL

DATE: January 19, 2012

PROJECT NUMBER: 432629

This technical memorandum presents the response to Investigative Order No. R6V-2011-0105 issued by the California Regional Water Quality Control Board, Lahontan Region (Water Board) (Water Board, 2011), which requested information on laboratory quality control data for the Groundwater Background Study Report (CH2M HILL, 2007), prepared on behalf of Pacific Gas and Electric Company (PG&E) for the Hinkley Remediation Project. In addition, this memorandum presents responses to comments provided by Dr. Nagourney in the Peer Review received by the Water Board on October 14, 2011.

The responses to questions one through nine in Investigative Order R6V-2011-0105 are provided below.

- 1) **Comment:** For the continuing calibration verification (CCV) failures for EPA Method SW 7199, discuss what percentage out of range were the CCV recoveries.

Response: During the first Groundwater Background Study sampling event, (January/February 2006) all Method SW 7199 sample analyses were performed by Truesdail Laboratories, Inc. (TLI) and the CCV recoveries for all analyses were within the method criteria of 90 – 110% recovery.

For the three subsequent sampling events, all Method SW7199 sample analyses were performed by EMAX Laboratory (EMAX). Of the 129 sample analyses performed by EMAX, 31 (26 samples and 5 field duplicates) or 24 percent had one or more of the bracketing CCVs with recoveries that were outside the method criteria. CCV recoveries for the out of control sample analyses ranged from a low of 72 percent to a high of 123 percent with 19 results biased low and 12 biased high. In accordance with the PG&E program Quality Assurance Project Plan (QAPP) (CH2M HILL, 2008) that cites USEPA National Functional Guidelines for Inorganic Data Review (2002), the range of the out of control CCV recoveries was not significant enough to warrant data rejection, but did require data qualification by applying "J/UJ" flags to out of control results. Therefore, the results were determined to be of sufficient quality to be used for purposes of the Groundwater Background Study.

- 2) **Comment:** Provide raw data, calibration curves, CCVs, and quality control (QC) samples, from hexavalent chromium analysis.

Response: All analytical data for hexavalent chromium are provided on the enclosed CD. The data are organized by sample delivery groups (SDGs) provided to CH2M HILL by the laboratories. There are 17 SDGs from EMAX and four SDGs from TLI. The table below identifies each SDG number associated with hexavalent chromium analysis associated with the Groundwater Background Study.

EMAX SDG Numbers	TLI SDG Numbers
06D180, 06D191, 06D205, 06D215, 06G152, 06G165, 06G182, 06G200, 06I248, 06I262, 06I280, 06J236, 06J257, 06J279, 06K142, 06K156, 06K180	951265, 951327, 951368, 951421

- 3) **Comment:** Provide information on matrix spike amounts and recoveries for hexavalent chromium.

Response: The spike concentration at TLI for hexavalent chromium was 1.0 microgram per liter ($\mu\text{g/L}$). There were four SDGs of data with three different site specific matrix spike samples in three of the four SDGs. The SDG without the site specific matrix spike has a matrix spike completed on a non-site sample. The recoveries were all in control with 98, 94, and 106 percent recovery. The acceptance limits used by the laboratory were 90 – 110 percent. The concentration of the matrix spike was five times the reporting level and applicable to the majority of sample concentrations determined over the study.

The spike concentration at EMAX Laboratory for hexavalent chromium was 1.0 $\mu\text{g/L}$. There were 17 SDGs of data with 18 different site specific matrix spike samples in 15 of the 17 SDGs. The SDG without the site specific matrix spike has a matrix spike completed on a non-site sample. The recoveries were predominantly in control ranging from 76 to 115 percent recovery. The acceptance limits used by the laboratory were 85 – 115 percent. Two of the 18 matrix spikes were out of control with a low bias but still provide data that met project data quality objectives for evaluating background hexavalent chromium concentrations. The concentration of the matrix spike was five times the reporting level and applicable to the majority of sample concentrations determined over the study.

- 4) **Comment:** A description of how samples were chosen for matrix spiking.

Response: The matrix spikes were randomly selected by the laboratory as part of the analytical batch control requirements.

- 5) **Comment:** Provide evidence that Mid-Range Calibration Check Standards (MRCCSs) were prepared from a second source standard. Provide National Institute of Standards Traceability (NIST) documentation for MRCCSs.

Response: MRCCSs were prepared from a different lot number source from the initial calibration stock at TLI as well as at EMAX Laboratory as shown in files provided on the attached CD. This same standards traceability documentation is also available in each of the SDGs provided in response to Question Number 2.

- 6) **Comment:** Verify which calibration curve was used for EPA Method 6010B (was the standard or low level calibration curve used?). Provide documentation showing calibration curve.

Response: Method 6010B was not used by either lab for the Hinkley Groundwater Background Study rather Method 6020 was used for total chromium analysis as explained in the response to Question Number 9.

- 7) **Comment:** Provide valid California Environmental Laboratory Accreditation Program (ELAP) certificates for each lab for total and hexavalent chromium analysis for the calendar year 2006.

Response: Both TLI and EMAX were ELAP certified in 2006. Copies of the certifications for 2006 are provided in Attachment A.

8) **Comment:** Discuss why EPA Method 6800 was not used for chromium species identification.

Response: The Hinkley Background Study was conducted from January to November 2006 and therefore pre-dated the promulgation of Method 6800, which was posted in February 2007.

9) **Comment:** Discuss why EPA method 6020A was used instead of Method 6010 for total chromium.

Response: USEPA method 6020A achieves a lower level of detection for total chromium than that of EPA Method 6010B and therefore was used for the project.

Attachment B to this technical memorandum provides additional responses to comments provided by Dr. Nagourney regarding the quality control procedures used by the laboratory for chromium analysis. In summary, based on a review of the laboratory methods and data obtained for the study, the quality of the laboratory analysis performed for the study was appropriate and met all of the requirements of the USEPA methods employed. The issues raised by the reviewer can be explained by 1) the incomplete answers provided to the reviewer by the laboratories, 2) expectations of the reviewer for quality control measures that were slightly different or beyond the requirements of the USEPA methods, or 3) a misunderstanding on the part of the reviewer about which methods were applied to the data set. As summarized in Attachment B, the data yielded through these analyses are deemed of high quality and the use of these data for the purposes of the background study was appropriate. A detailed response to comments on the laboratory chemistry comments is provided in Attachment B.

INVESTIGATIVE ORDER NO. R6V-2012-0057

REQUEST FOR URANIUM AND GROSS ALPHA AND BETA RADIATION DATA, PACIFIC GAS AND ELECTRIC COMPANY (PG&E), HINKLEY COMPRESSOR STATION, SAN BERNARDINO COUNTY

This Investigative Order directs PG&E to submit a technical report to the Water Board describing the extent of radionuclides in groundwater, soil, and air in Hinkley. The Water Board's requirement that you submit technical reports is made pursuant to Section 13267 of the California Water Code.

Background

PG&E is currently operating four irrigated fields as interim remedial measures for chromium in groundwater from historic discharges at the Hinkley Compressor Station. These fields are used for growing alfalfa or fodder crops for the purpose of chromium remediation and plume containment. The operation of these fields is documented in quarterly reports submitted to the Water Board for the Desert View Dairy and for the combined Gorman, Cottrell, and Ranch fields. Data in quarterly reports for the latter properties show that besides chromium, irrigation water contains uranium, gross alpha, and gross beta radiation at concentrations exceeding drinking water standards of 20 picocuries per liter (pCi/L), 15 pCi/L, and 50 pCi/L, respectively. The reports speculate that these radionuclides are naturally occurring from area bedrock.

The Water Board requires that PG&E submit any known (already collected) uranium, gross alpha, and beta radiation information relating to the four irrigated fields, other remedial actions, and water supply wells at the compressor station and within the Hinkley community. This information is needed to help understand and assess existing conditions and understand the potential influence of remedial actions of radionuclides in groundwater, soil and air.

Requirements

Pursuant to section 13267 of the California Water Code, PG&E is required to submit to the Water Board a report **by November 30, 2012** containing the following items:

- Uranium and gross alpha and beta radiation data for the groundwater used for PG&E's irrigation activities in the five fields being operated.
- Uranium and gross alpha and beta radiation data for samples from off-site locations. Off-site groundwater sampling should include locations that are: 1) upgradient and downgradient of the agricultural treatment units; 2) upgradient and downgradient of the chromium plume; and 3) cross gradient to the agricultural treatment units and outside the chromium plume. The off-site locations upgradient of the chromium plume should also be upgradient of any active or recently active agricultural fields in order to assess uranium levels in areas unaffected by agricultural activity.
- Recent and past water quality data for uranium and gross alpha and beta radiation from irrigation, monitoring, extraction, and domestic wells from any location in Hinkley Valley.
- Recent and past soil sampling data for uranium and gross alpha and beta radiation from any location in Hinkley Valley.
- Any air monitoring data involving uranium and gross alpha and beta radiation from any location in Hinkley Valley, including upwind and downwind of active agricultural treatment fields.

The bulleted information shall be presented in tables, shown on maps, and described in the text of the report. The report shall cite which data or information was submitted in the past to the Water Board and which data or information is new. Where PG&E does not have the requested information, the report shall say so.

Enforcement

Technical reports required by this order are necessary to investigate the water quality in the Hinkley basin during PG&E's ongoing cleanup of chromium pursuant to Cleanup and Abatement Order R6V-2008-0002 and amendments. The need for this investigation outweighs the burden on PG&E to produce the information in that radionuclide data will assist in evaluating potential threats to public health in the environmental impact report that could result from PG&E's proposed cleanup alternatives.

Pursuant to section 13268 of the Water Code, a violation of Water Code Section 13267 requirement may subject you to civil liability of up to \$1,000 per day for each day in which the violation occurs.

INVESTIGATIVE ORDER NO. R6V-2013-0041

REQUEST FOR ADDITIONAL INFORMATION OF THE NORTHWEST FRESHWATER INJECTION SYSTEM, PACIFIC GAS AND ELECTRIC COMPANY (PG&E), HINKLEY COMPRESSOR STATION, SAN BERNARDINO COUNTY, BOARD ORDER NO. R6V-2008-0014

This Investigative Order directs PG&E to submit a technical report to the Water Board containing additional information concerning the operation and maintenance of the Northwest Freshwater Injection System (NWFI) in Hinkley. The Water Board's requirement that you submit technical reports is made pursuant to Section 13267 of the California Water Code.

Background

PG&E is currently injecting clean water into five injection wells on Serra Road as an interim remedial measure for chromium in groundwater from historic discharges at the Hinkley Compressor Station. The injection wells comprise the NWFI system that creates a freshwater barrier in the saturated zone for the purpose of preventing chromium migration westward. The operation and maintenance of the NWFI system is required to be documented in quarterly reports, pursuant to Board Order R6V-2008-0014 for General Waste Discharge Requirements (General Permit).

Prior to startup of the NWFI system, PG&E conducted a modeling exercise using an injection rate of 80 gpm to maintain an adequate groundwater barrier to prevent chromium plume migration westward (Stantec, September 2008). The Water Board Executive Officer accepted the model results in approving the Notice of Applicability for General Waste Discharge Requirements (Board Order R6V-2008-0014). The Water Board has not received a revised groundwater model showing that an injection rate of less than 80 gpm can achieve an effective freshwater barrier, laterally and vertically, in groundwater.

PETER C. PUMPHREY, CHAIR | PATTY Z. KOUYOUMDJIAN, EXECUTIVE OFFICER

14440 Civic Drive, Suite 200, Victorville, CA 92392 | www.waterboards.ca.gov/lahontan

PG&E's Fourth Quarter 2012 and First Quarter 2013 monitoring reports contain limited information on the operation and maintenance of the NWFI system. For instance, the two reports state that water was injected into the five injection wells at an annual average injection rate of 63 and 60 gallons per minute (gpm), respectively. The statements imply that operations were normal or typical during the two quarters. Yet, the tabulated data in the monitoring reports indicate otherwise. For instance, Table 2-12 contains the quarterly operations log for the NWFI system. The logs in both reports reflect extensive activities for backwashing and maintenance of the injection wells, different from the normal or typical activities that PG&E described in prior quarterly reports.

The activities reported in Table 2-12 suggest extensive downtime of the system during Fourth Quarter 2012 and First Quarter 2013, which has not been explained. This conclusion is supported by freshwater discharge data provided in Table 2-11. In Fourth Quarter 2012, the average injection rate into injection well IN-03 was at 7.6 gpm, which was a 41% reduction from the prior quarter. Further, the total days of pumping for IN-03 in the same quarter was an average of 20 days, down from almost 30 days the quarter before. None of these reductions were mentioned in the Fourth Quarter 2012 or First Quarter 2013 monitoring reports. The First Quarter 2013 monitoring report also did not describe quarterly specific operations and maintenance activities and reductions made in the NWFI system.

The NWFI injection rates listed in the Fourth Quarter 2012 and First Quarter 2013 monitoring reports are significantly (20 percent or more) less than 80 gpm. The quarterly average injection rate reported for Fourth Quarter 2012 was 57.6 gpm and in First Quarter 2013 was 53.6 gpm. The reduced NWFI average discharge rates are not discussed in quarterly monitoring reports, neither are the reduced average injection rate for IN-03 for the period. In addition, neither monitoring report discussed quarterly specific maintenance actions for well development or discharges of rehabilitation chemicals. Furthermore, the only mention of activities planned for the next quarter in each monitoring report is "NWFI system operations will continue," without any discussion to improve injection rates or number of days of operation. These issues are significant considering that current plume maps show the chromium plume migrating between injection wells IN-02 and IN-03 to the west.

In a May 14, 2013 conference call, Water Board staff expressed concern of the above-mentioned topics to Kevin Sullivan and Iain Baker of PG&E. Board staff stated we believe quarterly monitoring reports were not providing adequate or detailed information regarding the operation and maintenance of the NWFI system. Mr. Sullivan then described in detail well development activities conducted and chemicals being used to remove well screen encrustation from the injection wells to increase injection rates to prior levels. These activities led to downtime of injection wells and operation of the freshwater barrier. In light of detected chromium concentration in monitoring wells located west of the Serra Road and the freshwater barrier, this information is relevant and needs to be provided in a report addendum.

Therefore, the Water Board requires that PG&E submit an addendum report to the Fourth Quarter 2012 and First Quarter 2013 monitoring reports describing all operation and maintenance activities and chemicals used for the NWFI system as described below.

Requirements

Pursuant to section 13267 of the California Water Code, PG&E is required to submit to the Water Board an addendum report by July 1, 2013 containing the following items regarding the NWFI system during Fourth Quarter 2012 and First Quarter 2013:

- Explanation of operation and maintenance activities for all injection wells and description of any deviances from prior quarters.
- Discussion of the average injection rate and total days of operating during the period for IN-03, in comparison to the prior quarter.
- Discussion of the type, amount, and concentration of chemicals used for well development.
- Amend Table 2-11 to show the total calculation of all columns for the quarter being reported.
- Discussion of the average injection rate and total days of operating for the entire NWFI system, in comparison to the prior quarter.
- Discussion how reduced operation of certain injection wells and the NWFI system as a whole has on the areal extent of and effective depth of the freshwater barrier to prevent chromium plume migration westward.
- Discussion on the activities planned for the next quarter to increase the injection rate and days of operation for IN-03 and the NWFI system as a whole.
- Actions needed to increase annual average injection rates to 80 gpm or a justification of why another number is effective at creating a barrier laterally and vertically. Justification shall consist of a revised groundwater model or other equally effective method.

Enforcement

Technical reports required by this order are necessary to investigate the water quality in the Hinkley basin during PG&E's ongoing cleanup of chromium pursuant to Cleanup and Abatement Order R6V-2008-0002 and amendments. The need for this investigation outweighs the burden on PG&E to produce the information in that radionuclide data will assist in evaluating potential threats to public health in the environmental impact report that could result from PG&E's proposed cleanup alternatives.

Pursuant to section 13268 of the Water Code, a violation of Water Code Section 13267 requirement may subject you to civil liability of up to \$1,000 per day for each day in which the violation occurs.

FOLLOW-UP ON MAY 16, 2013 EMAIL REGARDING REQUIREMENTS TO PROVIDE REPLACEMENT WATER TO WELLS WITHIN ONE-MILE OF WELLS EXCEEDING 3.1 µg/L HEXAVALENT CHROMIUM OR 3.2 µg/L TOTAL CHROMIUM THAT ARE OUTSIDE OF THE CONTIGUOUS PLUME

In late May 2013, I received a telephone call from your representatives, objecting to an assertion made by the Lahontan Water Board staff about PG&E's obligation to provide replacement water to property owners on the eastern side of the plume, within one-mile of monitoring well (MW) 145S. In a May 16, 2013 email to PG&E, Lahontan Water Board staff asserted that property owners within one-mile cross gradient or downgradient from any monitoring well that is over 3.1 micrograms per liter (µg/L) hexavalent chromium or 3.2 µg/L total chromium must be added to the replacement water program. After reviewing the existing orders, including the 2011 Whole House Replacement Water Cleanup and Abatement Order (Replacement Water CAO; R6V-2011-0005A1), and the 2012 amendment (R6V-2011-0005A2) to that order, I agree with your conclusion that PG&E is not obligated to provide water to those households under the requirements of the existing orders.

The original Replacement Water CAO defined "affected area" to include all domestic wells within one mile downgradient or cross-gradient from the 3.1 µg/L hexavalent chromium plume, and that the 2012 amended Replacement Water CAO did not change the definition of "affected area," but specifically states that it would continue to "include all domestic wells located laterally within one mile downgradient or cross-gradient from the **contiguous**, including contiguous areas depicted with dashed lines, 3.1 µg/L hexavalent chromium or 3.2 µg/L total chromium plume boundaries..." (2012 Replacement Water CAO amendment, Finding 4). Footnote 2 of the 2012 Replacement Water CAO amendment was not intended to change the definition of the affected area, and that the footnote says nothing about adding non-contiguous wells to the CAO requirements. MW-145S is outside of the contiguous plume. The distance between MW-145S and the nearest well within the plume is approximately 4,200 feet, which exceeds the 2,600 feet that PG&E is required to use to connect monitoring wells having chromium concentrations of 3.1 µg/L hexavalent chromium or 3.2 µg/L total chromium or greater, defining the contiguous plume boundary.

PETER C. PUMPHREY, CHAIR | PATTY Z. KOUYOUMDJIAN, EXECUTIVE OFFICER

2501 Lake Tahoe Blvd., So. Lake Tahoe, CA 96150 | www.waterboards.ca.gov/lahontan

In review of the applicable orders, which include the 2011 Replacement Water CAO, the 2012 amendment to that Order, and R6V-2008-0002-A4, which requires that plume boundary lines be drawn to connect monitoring wells within one-half mile of any other monitoring well having chromium concentrations above 3.1 µg/L hexavalent chromium or 3.2 µg/L total chromium, I agree that by the terms of our orders, PG&E is only required to provide replacement water to those with detections of chromium within one-mile of the contiguous plume, and that MW-145S is not part of the contiguous plume. Not only is this consistent with the terms of the orders, but upon further investigation, is also consistent with how PG&E has been implementing its replacement water program in the past. I would, however, encourage you to use your resources, where able, to address the community's concerns about their water supply.

If you have any questions or concerns about my conclusions, please contact Doug Smith, Richard Booth, or the board's counsel, Kim Niemeyer.

CLEANUP AND ABATEMENT ORDER NO. R6V-2011-0005A3 FOR PACIFIC GAS AND ELECTRIC COMPANY (PG&E) COMPRESSOR STATION, HINKLEY, SAN BERNARDINO COUNTY

I have enclosed for your attention an amendment to Cleanup and Abatement Order No. R6V-2011-0005A3 (Order) allowing the interim replacement bottled water that PG&E supplies to residents of Hinkley, California that meet the requirements of the Whole House Replacement Water Program to contain concentrations of up to 1.2 µg/L of hexavalent chromium, instead of less than 0.02 µg/L. On May 9, 2013 I sent a letter to PG&E and the community revising the interim replacement bottled water concentration level (determination 4) and the attached revised Order makes the appropriate technical corrections.

As required by section 13304(f) of the California Water Code, and as stated in Finding No. 4 in the attached Order, the replacement water must be of comparable quality to that which the residents had prior to the discharge of waste that adversely affected the water supply. Because the average background concentration of hexavalent chromium in the Hinkley community is 1.2 µg/L, providing bottled water with concentrations of hexavalent chromium not exceeding that amount meets the requirements of section 13304(f) the Water Code. The water quality requirement for the permanent replacement water supply remains unchanged.

If you have any questions regarding the enclosed Order, please call Doug Smith at (530) 542-5453 or me at (530) 542-5412.

Lahontan Regional Water Quality Control Board

May 9, 2013

Sheryl Bilbrey
Director, Remediation Program Office
Pacific Gas and Electric Company
3401 Crow Canyon Road
San Ramon, CA 94105-1814

Dear Ms. Bilbrey:

In letters dated January 10, and February 7, 2013, you made several requests on behalf of Pacific Gas and Electric Company (PG&E) for modifications of existing California Regional Water Quality Control Board, Lahontan Region (Water Board) Orders. Your first letter requested modifications to monitoring of the whole house replacement water (WHRW) ion exchange (IX) and under-sink reverse osmosis (RO) systems. These requests were reiterated in a letter of March 11, 2013, and supplemented with several additional requests, including increasing the minimum hexavalent chromium concentration from the IX effluent from 0.06 to 2 µg/L, and moving the compliance point from the effluent from each RO unit to the IX treated water. Your February 7 letter set out an additional four requests: 1) a 90-day extension of the deadlines for the WHRW program, in order to reexamine the options for providing water to eligible homes in Hinkley; 2) an ability for residents to decline the RO systems; 3) ability to meet requirements for interim replacement (bottled) water by providing commercially available bottled drinking water; and 4) re-evaluation of the need to expand the 1-mile buffer zone in the future.

After considering comments from the Community Advisory Committee (CAC), through its technical advisors at Project Navigator; four individual members of the public; and the Lahontan Regional Water Board's prosecution team, I have made the following determinations.

1. Requests of January 10 and March 11 for Changes to Monitoring of IX and RO Systems

Your January 10, 2013 letter requested two specific modifications to its permanent replacement water supply monitoring plan that is required under Order 2.c.8 of Cleanup and Abatement Order No. R6V-2011-0005A1 (referred to hereafter as the CAO): 1) monitor leachates from the IX resin on a batch basis, rather than at each home during start up, and 2) monitor each RO unit during start-up and then every six months

PETER C. PUMPHREY, CHAIR | PATTY Z. KOUYOUMDJIAN, EXECUTIVE OFFICER

2501 Lake Tahoe Blvd., So. Lake Tahoe, CA 96150 | www.waterboards.ca.gov/lahontan

thereafter rather than the biweekly or as needed basis stated in its current plan.¹ PG&E in its March 11, 2013 letter reiterated its request #2, above, and additionally requested that the compliance point should be the IX treated water and not at each RO unit effluent.

In addition to reviewing the comments from the Water Board Prosecution Team and from other interested stakeholders, the Regional Board advisory team has reviewed Exhibit 1, Reverse Osmosis Investigation Report by Arcadis, enclosed in the March 11, 2013 letter. I am providing the following rulings on PG&E's requested modifications to its permanent replacement water supply monitoring program:

- A. I am denying the request for IX resin leachate monitoring at each property.** Although batch testing may provide useful information, batch testing is unable to collect data specific to each IX unit and, therefore, cannot be used to determine if each IX unit is working properly.
- B. I accept the proposal to monitor each RO unit at start-up then every six months thereafter.** The start-up testing is critical to ensure the RO unit is well-flushed and working properly. The reduced monitoring after start-up should be less inconvenient to each residence and provide assurance that each RO unit is working properly.
- C. For those households that decline installation of the RO unit, I am accepting the compliance point to be the water treated from the IX unit. However, if an RO unit is accepted by the residence, then PG&E must perform the required monitoring, and compliance will be at the outlet of each RO unit.** This is a reasonable solution to accommodate the individual household needs while still ensuring water quality compliance.

2. Request from February 7 for 90 Day Extension to Reexamine WHRW Options

You had requested a 90 day extension of all applicable deadlines contained in the WHRW Program in order to address community concerns, evaluate technologies analyzed in the June 2012 Feasibility Study, and incorporate lessons learned during WHRW Program startup and implementation. You propose to issue a Feasibility Study Addendum that will identify and address changes required for the WHRW program.

I am denying your request for a 90 day extension of all applicable deadlines contained in the WHRW Program, but I would be willing to accept your Addendum and continue discussions about effective ways to provide alternative drinking

¹ Two pages of text and a two-page table from PG&E's June 6, 2012 Replacement Water Feasibility Study contain all elements of PG&E's current monitoring plan (PDF copy enclosed for reference) for its permanent replacement water supply.

water supplies to the community. As a practical matter, 90 days has already passed since your initial request. I believe, however, that it is still important to re-examine the WHRW Program and incorporate lessons learned and feedback from the community. Moreover, I have already granted a five month extension for those properties that have not signed an access agreement in my April 18, 2013 letter.

3. Request from February 7 Letter to Allow Residents to Decline an RO Unit

With respect to your request for residents who have elected a WHRW system, which consists of an IX and under-sink RO unit, to be allowed to decline installation of the RO unit, **I have decided to grant this request conditioned on the provision that PG&E provide the resident(s) with clear information regarding how this decision may affect the quality of the water delivered inside their homes through the IX system alone.** It is important that residents understand that although hexavalent chromium should be removed by the IX system, other constituents found in their domestic well may not be removed without the operation of the RO unit.

4. Request from February 7 Letter that Provision of Interim Replacement Water be Satisfied with Commercially Available Bottled Water

You have requested that the CAO requirements for interim replacement water (bottled water) be satisfied by PG&E's provision of commercially available bottled drinking water, without the requirement of further testing to ensure that the bottled water is non-detect for hexavalent chromium. **This request is denied; however, I am willing to change the requirements for replacement water quality from non-detect for hexavalent chromium to 1.2 ppb, which is the average background of hexavalent chromium for the Hinkley Valley, established by the Water Board in Amended CAO R6V-2008-0002A1.** I believe that this change will meet the requirements of Water Code section 13304, which requires that the replacement water not only meet all applicable federal, state, and local drinking water standards, but that it also have a comparable quality to that pumped by the private well owner prior to the discharge of waste. Recognizing that there is no drinking water standard for hexavalent chromium, and that bottled water, which is regulated by the Food and Drug Administration (FDA), may have up to 100 ppb total chromium (see <http://www.fda.gov/ForConsumers/ConsumerUpdates/ucm203620.htm#EnsuringQualityandSafety>), requiring bottled water to meet 1.2 ppb of hexavalent chromium would give the community replacement water of a comparable quality to that pumped by the well owner, in the absence of a more restrictive drinking water standard. Although I understand that the additional testing and warehousing of water provides additional and challenging order requirements, PG&E is currently meeting those requirements, and has established a monitoring program to ensure that the water they are providing does not have levels of hexavalent chromium that exceed what residents may naturally have in their wells.

5. Request from February 7 Letter to Re-evaluate the 1 mile buffer

Lastly, you are requesting approval from the Water Board to re-evaluate the need to expand the 1-mile buffer zone in the future. You have based this request on your assessment that the chromium plume is not continuing to migrate to the west. **At this time I will not change the 1-mile buffer, but I am willing to consider all relevant scientifically-based technical information to establish a buffer zone. As additional relevant data becomes available, PG&E should disseminate that information to stakeholders, including the Water Board and the CAC and its technical consultant, for subsequent review and analyses under a technical exchange meeting process.**

In closing, I would like to acknowledge the work that PG&E has done to meet the requirements of the Water Board's orders, including the Order to provide WHRW to all residences within one-mile up-gradient or cross-gradient of the plume whose wells have detections of hexavalent chromium. I believe that we are on our way to providing the community a safe, reliable, and convenient source of water for their homes. I do believe, however, that we still have a lot of work to do. I encourage PG&E to keep working to find ways to make this process convenient for the residents of Hinkley, and welcome additional suggestions that you or the community may have. Although the Water Board's jurisdiction is over water quality and related nuisance, we don't want solutions to the existing water quality problems to be blind to the effect that they have on the community at large, and encourage you to work with the community to find solutions that not only address water quality, but also help the community to remain whole.

Sincerely,

Patty Z. Kouyoumdjian
Executive Officer

**CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
LAHONTAN REGION**

**AMENDED CLEANUP AND ABATEMENT ORDER NO. R6V-2011-0005A3
WDID NO. 6B369107001
REQUIRING PACIFIC GAS AND ELECTRIC COMPANY
TO CLEAN UP AND ABATE WASTE DISCHARGES OF
TOTAL AND HEXAVALENT CHROMIUM TO THE
GROUNDWATERS OF THE MOJAVE HYDROLOGIC UNIT**

San Bernardino County_____

The California Regional Water Quality Control Board, Lahontan Region (Water Board), finds:

1. The Pacific Gas and Electric Company (PG&E) owns and operates the Hinkley Compressor Station located southeast of the community of Hinkley in San Bernardino County.
2. On October 11, 2011, the Water Board issued Cleanup and Abatement Order R6V-2011-0005A1 (Order) to PG&E. The Order required, in part, that PG&E provide interim and whole house ("permanent") replacement water service to those served by domestic or community wells that are within the affected area and determined to be impacted by its discharge. PG&E has provided interim replacement water service in the form of bottled water delivered to residents in the affected area that are determined to be impacted by its discharge.
3. The Order requires that bottled water provided as the interim replacement water must meet primary and secondary drinking water standards. Because there is currently no drinking water standard specifically for hexavalent chromium, the Order required that interim replacement water not exceed the public health goal of 0.02 ug/L¹, or the final Maximum Contaminant Level (MCL), once that standard is adopted by the California Department of Public Health (CDPH).
4. In a letter dated February 7, 2013, to the Water Board, PG&E requested "that the order requirements for interim water replacement (bottled water) be satisfied by PG&E's provision of commercially available bottled drinking water." PG&E stated that the requirement that bottled water have non-detectable levels of hexavalent chromium is challenging to meet and creates unnecessary uncertainty and alarm in the community about the quality of bottled water service.
5. Water Code 13304(f) requires that replacement water be of comparable quality to that which it was provided by the well prior to the adverse effect to the water supply by the discharge. For the purposes of interim water supply, the average background concentration of hexavalent chromium is considered "comparable water quality." The

¹ Because this is below the reporting limit, for purposes of this standard, drinking water must test below the reporting limit of 0.06 ug/L due to the limitation of laboratory analysis to accurately detect lower levels of chromium.

average background concentration of hexavalent chromium is 1.2 µg/L, as established in Cleanup and Abatement Order No. R6V-2008-0002A1. The hexavalent chromium water quality requirement for the permanent, whole house replacement water supply is unchanged.

6. The issuance of this Order is an enforcement action taken by a regulatory agency and is exempt from the provision of the California Environmental Quality Act (CEQA) (Public Resources Code section 21000 et seq.), pursuant to California Code of Regulations (CCR), title 14, section 15321, subdivision (a)(2). In addition, CEQA includes a "common sense exemption" in CCR title 14, section 15061, subdivision (b)(3), which states that where it can be seen with certainty that there is no possibility that the activity in question may have a significant effect on the environment, the activity is not subject to CEQA. It can be seen with substantial certainty that the issuance of this order, which amends Order R6V-2011-0005A1, would not have a significant effect on the environment.

IT IS HEREBY ORDERED, pursuant to Water Code section 13304 that Order No. R6V-2011-0005A1 is amended as follows:

CAO R6V-2011-0005A1, paragraph 1.b, fourth sentence reads:

"The report must include documentation to show that interim water supply meets state primary and secondary drinking water standards and hexavalent chromium levels of less than 0.02 µg/L¹ or the final MCL, once that standard has been adopted by CDPH."

¹ For the purposes of the 0.02 µg/L standard, drinking water must test below the reporting limit of 0.06 µg/L due to the limitation of laboratory analysis of low levels of chromium.

CAO R6V-2011-0005A1, Paragraph 1.b., fourth sentence is amended to read:

"The report must include documentation to show that interim water supply meets state primary and secondary drinking water standards and hexavalent chromium levels of up to 1.2 µg/L or the final MCL, once that standard has been adopted by CDPH."

Previous Orders

All other Orders in CAO R6V-2011-0005, CAO R6V-2011-0005A1, CAO R6V-2011-0005A2, and CAO R6V-2013-0001 remain in effect unless later modified by the Water Board, the Water Board's Executive Officer, or his/her designated representative.

Right to Petition: Any person aggrieved by this action of the Lahontan Water Board may petition the State Water Board to review the action in accordance with Water Code section 13320 and California Code of Regulations, title 23, sections 2050 and following.

The State Water Board must *receive* the petition by 5:00 p.m., 30 days after the date of this Order, except that if the thirtieth day following the date of this Order falls on a Saturday, Sunday, or state holiday, the petition must be received by the State Water Board by 5:00 p.m. on the next business day. Copies of the law and regulations applicable to filing petitions may be found on the Internet at: http://www.waterboards.ca.gov/public_notices/petitions/water_quality or will be provided upon request.

REQUEST TO REDUCE SAMPLING FREQUENCY OF MONITORING WELLS FOR THE PACIFIC GAS AND ELECTRIC (PG&E) COMPRESSOR STATION, HINKLEY, SAN BERNARDINO COUNTY (WDID 6B369107001)

Lahontan Water Board staff has reviewed PG&E's September 13, 2013 "Plan for Reducing Monitoring Well Sampling Frequency (Plan)." PG&E has identified 51 monitoring wells which meet criteria PG&E believes justify reducing monitoring frequency at certain well locations. PG&E proposes to modify the sampling frequency of these wells from four times per year to once per year. All of the proposed wells are associated with the site-wide quarterly Groundwater Monitoring Program and Desert View Dairy monitoring and reporting program (the current agricultural WDR); no wells associated with the in-situ remediation zone (IRZ) or other agricultural treatment units (ATU) monitoring programs are proposed for reduced sampling frequency. The 51 wells are shown on an figure in the Plan as being located in four areas: in the migrating plume in the north Hinkley Valley, between the northern and southern Hinkley Valley plumes, between the southern plume and Dixie Road, and on the southern Compressor Station property. PG&E's criteria for selecting these wells include:

- Being classified as 'monitoring' wells rather than injection, extraction, or other well types,
- Having a minimum of six quarters of sampling data,
- No recorded chromium concentration equal to or above 3.1 ppb for Cr(VI) and/or 3.2 ppb for Cr(T), and
- Not be specified for compliance sampling under a Board Order.

Upon careful consideration, the Water Board has decided not to make changes to the existing monitoring frequency requirements at this time for the proposed monitoring wells. Our review indicates that only about eight monitoring wells are considered to be in low risk locations to justify reducing the sampling frequency. These low risk locations include the southern compressor station property and the lower aquifer. Proposed monitoring wells located in the downgradient groundwater flow direction of the chromium plume are needed in the long term to verify plume boundaries and containment. In addition, proposed monitoring wells located between the southern

Sheryl Bilbrey
PG&E

- 2 -

plume and Dixie Road are needed to monitor the eastern plume boundary. These latter wells will especially be needed upon implementation of future ATUs. So while some proposed wells are considered to be in low risk locations, we are reluctant to modify sampling frequency for wells on an individual basis at this time.

Given the large number of monitoring wells associated with the site, approximately 600, the Water Board is not opposed to a reduced frequency for low risk monitoring wells. For instance, monitoring wells located in the upgradient or cross gradient groundwater flow direction, with several years of data verifying stable or reduced chromium concentrations, and which are not needed for future remedial action monitoring would meet our criteria. We prefer to look at this issue from a holistic point-of-view for the entire site-wide groundwater monitoring program while considering all current and planned corrective actions. Water Board staff is willing to meet with PG&E and the community to discuss reduced sampling frequency of monitoring wells in the site-wide program that does not conflict with other monitoring requirements, such as for mitigation required as part of the Environmental Impact Report. We will consider the proposed monitoring wells believed to be low risk, mentioned above, as part of this process along with other locations.

Please contact me at (530) 542-5436 or lkemper@waterboards.ca.gov, or Lisa Dernbach at (530) 542-5424 or ldernbach@waterboards.ca.gov, to further discuss this matter.

COMMENTS ON ACTION PLAN FOR AREA WEST OF THE NORTHWEST FRESHWATER INJECTION SYSTEM, PACIFIC GAS AND ELECTRIC (PG&E), HINKLEY COMPRESSOR STATION, SAN BERNARDINO COUNTY (CLEANUP AND ABATEMENT ORDER NO. R6V-2008-0002-A4)

This letter provides the Lahontan Regional Water Quality Control Board (Water Board) comments to PG&E's Implementation of Action Plan West of the Northwest Freshwater Injection System (Action Plan), dated January 10, 2014. The Action Plan was submitted to comply with directives in Board Order No. R6V-2013-0087 for implementing corrective actions west of the Northwest Freshwater Injection System (NFIS). In addition, this letter requires PG&E to submit technical information and a status report for implementing additional corrective actions.

Background

Water Board staff has reviewed PG&E's January 17, 2014 Action Plan, prepared by Arcadis. The Action Plan summarizes initial corrective actions implemented west of the NFIS for reducing chromium concentrations in groundwater. Water sampling was conducted on the agricultural well 27-03 at the former Heifer Ranch (Ranch). Results show chromium concentrations ranging from 1.6 ppb to 2.0 ppb Cr6/CrT, which are slightly less than chromium concentrations when the well operated for the active ranch. Various pumping tests were completed in December 2013 to evaluate hydrogeologic properties of the shallow aquifer. The pumping tests at well 27-03 revealed that detectable drawdown was measured out to the NFIS, approximately 1,500 feet to the east, in the deep zone of the upper aquifer during pumping rates of 11 and 31 gallons per minute (gpm). A total of 188,000 gallons of water from the pumping test was stored onsite in Baker containers. Stored water from the pumping tests was discharged to the ground at the Ranch following confirmation water samples showed chromium concentrations less than 3.1 ppb Cr6 and 3.2 ppb CrT.

AMY L. HORNE PHD, CHAIR | PATIV.Z. KOUYUNDJIAN, EXECUTIVE OFFICER

2501 Lake Tahoe Blvd., So. Lake Tahoe, CA 96150 | www.waterboards.ca.gov/lahontan

To reduce chromium concentrations in groundwater, the Action Plan discusses two projects: a short-term one to be implemented during the first half of 2014 and a longer-term one, if needed, to be implemented during the second half of 2014. For the short-term project, the Action Plan recommends pumping water from a new extraction well to be installed near MW-153. Extracted water will either be used for dust control at PG&E off-site projects or on the Ranch property or applied to ground at the Ranch. If chromium concentrations in stored water exceed 3.1 ppb Cr6 and 3.2 ppb CrT, the water would be treated using an ion exchange modular unit prior to discharge. For the longer-term project, the Action Plan discusses piping extracted water east and applying it to existing, new or expanded agricultural treatment units. Lastly, the Action Plan states PG&E is moving forward with installing two new injection wells within the NFIS to improve the freshwater barrier.

Comments

The Fourth Quarter 2013 Groundwater Monitoring Report shows that chromium concentrations increased from 2.9 ppb to 7.6 ppb Cr6 in monitoring well MW-153, located just west of well 27-03 and close to Hinkley Road. This information confirms the Water Board's position in Board Order No. R6V-2013-0087 for the need to reduce chromium concentrations in the western area and prevent potential impact to nearby domestic wells.

Maps in Figures 1-1, 4-1, 4-2, and 4-3 show the chromium plume lines drawn from the NFIS to MW-153, towards Hinkley Road. However, the geologic cross section shown in Figure 5-1 shows chromium plume lines that are inconsistent with the other figures in the Action Plan. Water Board staff does not concur with the site conceptual model displayed in Figure 5-1, which shows the chromium plume in the western area drawn as isolated (not connected) circles at each monitoring well cluster and none at well 27-03. As stated in previous Water Board letters, PG&E has not demonstrated conclusively that chromium detected in the west is not from background conditions instead of from the plume on the east side of the NFIS. We therefore believe that the two separated chromium plumes drawn west of the NFIS need to be drawn as one continuous plume from monitoring well MW-169S2 and MW-121D to MW-153. Water samples showing chromium less than 3.1 ppb Cr6 and 3.2 ppb CrT at well 27-03 likely represents the diluted chromium plume due to pumping from the long-screen agricultural well drilled 40 feet into bedrock. Since water samples at well 27-03 are not from a monitoring well, that point should be ignored when drawing chromium plume boundaries in future technical reports.

Action Plan Recommendations

As was discussed at our February 21, 2014 meeting in South Lake Tahoe, the Water Board concurs with the Action Plan short-term recommendation to extract water from the western area during the first half of 2014 and either dispose to land at the Ranch or use for dust control off site. During first quarter 2014, these activities will account for approximately 9,000 gallons per day (gpd) or 6 gpm and during second quarter 2014 will increase up to possibly 17,000 gpd, or 12 gpm. If chromium concentrations exceed 3.1 ppb Cr6 or 3.2 ppb CrT, water will be treated using ion exchange before being applied to land or used for dust control.

From reading the Action Plan, it appeared to the Water Board that PG&E was proposing to implement the remedial action in first half 2014 by pumping from well 27-03 and installing a new extraction well if remedial actions were necessary in the second half of 2014. However, at our February 21, 2014 meeting, PG&E clarified that it is prepared to immediately install the new extraction well for remedial actions during the first half of 2014 and not use well 27-03. This proposal is acceptable to the Water Board with the comment that the new extraction well be located closer to well 27-03, which is nearer to the center of the chromium plume in the western area and where the upper aquifer is thicker compared to that where MW-153 is located. PG&E stated at the February 21, 2014 meeting that this change in location is acceptable. Furthermore, the Water Board recommends that pumping at the new extraction well be at a rate of no more than 11 gpm in the shallow zone so as to not potentially act on chromium on the east side of the NFIS.

If reduced chromium concentrations to background levels are not achieved in the western area by June 30, 2014, PG&E will need to implement one of the longer-term actions discussed in the Action Plan. Doing so should be effective enough to adequately protect nearby domestic wells.

Reporting

PG&E shall fully discuss and describe all corrective actions implemented in the western area to reduce chromium concentrations in groundwater.

1. As required in Board Order No. R6V-2013-0087, corrective actions implemented in the western area shall be fully discussed and described in quarterly monitoring reports for the NFIS and In-situ Remediation Zone (IRZ). Water samples for verifying chromium concentrations shall be collected prior to disposal to land for every Baker tank capacity of 20,000 gallons when the average daily pumping rate is 6 gpm or less. When the average daily pumping rate is greater than 6 gpm, water samples shall be collected for every 40,000 gallons. The location and volume of water disposal must also be described and shown on maps. Maps must depict chromium plume boundaries out to 3.1 ppb, 10 ppb, 50 ppb, and 1,000 ppb Cr6/CrT, based upon monitoring well data.
2. If chromium concentrations in western monitoring wells continue to exceed 3.1 ppb Cr6/3.2 ppb CrT through June 30, 2014, PG&E must submit a status report by **July 25, 2014** for implementing long-term continuous corrective actions. The status report shall describe in detail all tasks completed, ongoing, and planned for the project. All site maps in the report must draw the chromium plume boundaries out to 3.1 ppb, 10 ppb, 50 ppb, and 1,000 ppb Cr6/CrT, based upon monitoring well data.

Sheryl Bilbrey
PG&E

NOTICE OF INCOMPLETE REPORT OF WASTE DISCHARGE SUBMITTAL, WASTE DISCHARGE REQUIREMENTS FOR AGRICULTURAL TREATMENT UNITS (WDID 6B361403002, BOARD ORDER NO. R6V-2014-0023), PACIFIC GAS AND ELECTRIC COMPANY COMPRESSOR STATION, HINKLEY, SAN BERNARDINO COUNTY

Lahontan Regional Water Quality Control Board (Water Board) staff received the first of three Report of Waste Discharge (ROWD) submittals for the subject line Waste Discharge Requirements (WDRs) on April 4, 2014. According to the ROWD cover letter, two additional submittals are forthcoming to complete the full ROWD package: a biological and cultural package to be submitted in mid-April; and a construction package to be submitted in early May.

Water Board reviewed the April 4, 2014 submittal and determined that additional information is needed, described below.

Please note that this letter does not provide coverage under the WDRs for the proposed project. This letter conveys information needed to complete the April 4 submittal only, which primarily addresses water quality requirements contained in the WDRs. A Notice of Coverage will be issued to PG&E once the full ROWD package has been received and deemed complete.

PROJECT DESCRIPTION

The proposed project involves constructing and operating two new agricultural treatment units (ATUs) known as the Community East and Fairview ATUs, and expanding the existing Ranch ATU. The ATUs are proposed to treat chromium in groundwater and provide enhanced hydraulic containment of the chromium plume. Also, the irrigation system at the existing Desert View Dairy (DVD) ATU will be converted from subsurface drip irrigation to drag-drip irrigation (or equivalent method to prevent aerial spraying of groundwater).

All existing ATUs (DVD, Gorman North and South, Cottrell, and Yang ATUs) will also be covered under the WDRs. The total amount of new, expanded and existing ATUs covered under the WDRs is 327 acres.

ADDITIONAL INFORMATION NEEDED

The comments below cite sections, tables, and figures that require additional information in the ROWD. Please note that full descriptions are needed in the text portion rather than referring the reader to find the information in tables and figures.

1. Site Background, Section 1.1. Additional details of the ATUs currently in operation are needed. In the text of this section, please describe operations at the DVD, Gorman North and South, Cottrell, and Yang fields. State that the DVD was permitted under Board Order No. R6V-2008-0034, while the other existing fields were not, pending adoption of the WDRs R6V-2014-0023.
2. Remedial Objectives, Section 1.2; and Project Description, Section 2. The ROWD states the project is proposed to enhance the hydraulic containment and treatment of groundwater affected by chromium. Please provide additional description and details in this section on how the proposed project as a whole will enhance hydraulic containment and treatment of the chromium plume in groundwater *compared* to the existing remediation systems. Provide a comparison of extracted volume and chromium concentration or mass to be treated. Discuss total acreage of all combined projects and the range of total pumping rates. Provide figures showing the current hydraulic capture zones compared to anticipated capture zones.

If such details are contained in a different section of the ROWD, please reference such sections and associated figures.

3. Project Description, Section 2. Discuss the thickness (vertical extent) of the chromium plume in the areas to be remediated by the existing and proposed ATUs. Discuss whether extraction wells at existing and proposed ATUs are addressing and/or will address the full thickness of the chromium plume. If not, describe why.
4. Water Quality, Sections 2.1.2 and 2.2.2. A summary of the water quality for the proposed ATUs is described in the text and listed in Table 2-3. Please state whether any other constituents were found to exceed drinking water standards at any of the proposed project areas, and if so, provide such information in Table 2-3.
5. Proposed Southern ATUs, Section 2.2. State that the new ATU Community East will be on the same location as the former East Land Treatment Unit that operated between 1992 and 2001 and whether there will be any differences or changes from past operations.
6. Southern ATUs Design, section 2.2.1
 - a. The discussion states that existing extraction wells previously used at the site will be used for the Community East and Fairview ATUs. More discussion is needed about the prior use, age, design (including whether wells are screened in the deep or shallow zones of upper aquifer), current condition and suitability of these older extraction wells. Also, describe whether they will need to be rehabilitated and redeveloped prior to operation.

- b. b. Provide a discussion of how the existing and planned extraction wells for the proposed Southern ATUs affect the operation and effectiveness of the existing IRZ remediation project. For instance, what is the range of distances separating extraction wells for Southern ATUs and the range of reaction time for IRZ activities prior to migration to extraction wells. Also explain the reactions to occur in the proposed Southern ATUs if IRZ reagents or byproducts are present in extracted water applied to ground.
7. Water Rights, Section 2.4. The water rights owned by PG&E and amount of water needed to operate the project are discussed. Are the amounts just for the proposed ATUs in the ROWD or for all the ATUs operated by PG&E, including the Gorman, Cottrell, and Yang fields? Please clarify.
8. Groundwater Modeling and Analysis of Potentially Affected Wells, Section 3.1.
- a. It is not clear if the results of modeling discussed reflect just the proposed ATUs or the proposed and existing ATUs. Please clarify.
 - b. b. Please specify the range of groundwater extraction rates which were used to estimate non-PG&E pumping (first bullet on page 15), and the source of the data. Please describe the type of pumping that was considered non-PG&E pumping (e.g., domestic use, agricultural use).
 - c. Please provide the range of pumping rates used to estimate current ATU pumping (second bullet, page 15).
 - d. The numbers in table 3-1 do not match the text descriptions on page 15 (third bullet), and do not appear to account for the Fairview ATU. Please reconcile the text and table amounts for pumping, and include all pumping used in modeling assumptions.
 - e. Section 3.1 states that "particle track modeling was conducted to predict groundwater movement for 10 years", but no further information on the modeling is provided. Additional information is needed about particle track modeling and results depicted on figures 3-1, 3-2, 4-2 and 4-3. For example, describe what the "particles" represent. If the particles represent byproducts, what are the sources of the byproducts? How are the starting locations of the particle tracks determined? It appears particles do not always originate from ATUs, but in some cases from areas located laterally from ATUs. Why is this? What assumptions are used to determine lateral and vertical migration of the particles? How do existing remedial actions, such as in-situ remediation extraction and injection, affect particle tracks?
9. Domestic and Agricultural Supply Wells Potentially Affected by Agricultural Byproducts, Section 3.3 (and Figure 3-2). The text on page 18 states that Figure 3-2 depicts particle tracking results and indicates that no domestic or agricultural supply wells were determined to be potentially affected by agricultural byproducts due to ATU operation, since the water applied to ATUs will be captured by extraction wells

before reaching supply wells. However, Figure 3-2 does not show the currently known extent of byproducts in groundwater; for example, total dissolved solids and nitrates in groundwater near the Desert View Dairy. Without this information, it cannot be determined if extraction for ATU operations might influence existing byproduct plume movement such that supply wells could be affected.

Mitigation measure WTR-MM-2b states, in part, that supply wells are considered affected if byproduct concentrations exceed specified criteria due to remedial actions. Remedial actions include groundwater movement due to remedial pumping, as well as increases in byproduct concentrations due to the percolation of irrigation water from ATUs. Particle track modeling shown on figures attempts to address the latter action, but no analysis of the potential for byproduct plume movement due to groundwater extraction is provided. As stated in WTR-MM-2b, *Groundwater Modeling*, (WDRs Attachment F, page 22) "PG&E will annually model the movement of any byproduct plumes and will provide maps and descriptions of estimated plume movement . . . for the following three years". Please provide this information on additional figures (depicted yearly for three years), and provide in-text descriptions of the information and shown on such figures. Include a discussion if byproduct plume movement over the next three years may affect supply wells.

10. Domestic and Agricultural Supply Wells Potentially Affected by Drawdown, Section 3.4 (and Figure 3-1). In the text in section 3-4, please discuss whether Figure 3-1 indicates if any domestic wells are within the modeled 10-foot drawdown buffers, triggering analysis for increases in arsenic, manganese, uranium or gross alpha per mitigation measure WTR-MM-2c.
11. Agricultural Byproduct Sampling, Section 4.1.2. The text states that "during remediation, the sampling area includes 0.5 miles cross-gradient and 0.25 miles downgradient of the ATUs." The sampling area description should be corrected to read "0.5 miles downgradient and 0.25 miles cross-gradient . . ." (emphasis added).
12. Soil Sampling, Section 4.4. The text in the first paragraph on page 30 states that the "MRP specifies that Cr(III) should be sampled, but standard commercial analysis for Cr(III) for soil are unavailable. Cr(III) will be calculated as the difference between Cr(T) and Cr(VI)." In the next paragraph on page 30 of the ROWD, it states that, for the proposed southern ATUs, samples will be collected and analyzed for Cr(III) (insoluble salts).

Table E-4, ATU Soil Monitoring in the MRP, specifies that trivalent chromium (insoluble salts) is a required constituent for soil monitoring. Please clarify if soil samples will be analyzed for Cr(III) (insoluble salts) rather than being calculated as the difference between Cr(T) and Cr(VI).

13. Biological Monitoring, Section 5.2. This section discusses that PG&E does not have the authority to handle or relocate desert tortoises [until appropriate permits have been issued by wildlife agencies]. Please provide additional information about PG&E's procedures if a desert tortoise is observed in a work area.

14. The following table and figures are incomplete and need additional information:

- a. In Table 1-1, Summary of ROWD Requirements (row 1, column 1), the reference to the section containing information on establishing baseline chromium in supply wells is incorrect (should be section 4.1.1, not section 1.1.1).
- b. In the Summary Table of ATU Acreages, Estimated Irrigation Rates, and Water Rights (Table 2-1), please add a row showing acreages for each of the proposed ATUs.
- c. The discussion on Site Background on Page 1 references the PG&E Compressor Station but its location is not shown on any of the figures. The Compressor Station property needs to be labeled on these figures: 1-1, 2-5, 3-1, 3-2, 3-3, 3-4, 3-5, 4-1.
- d. Figure 3-2, the legend states that both gold and red colored lines represent particle tracks in the deep zone of the upper aquifer, unlike in Figure 3-1 where the legend states that the red colored particle track represents the shallow zone of the upper aquifer. Is one of these legends incorrect?
- e. On Figures 3-3, 3-4, and 3-5, show the location of active domestic well 34-06 which is in proximity to the boundaries depicted in modeling results for potentially affected domestic wells.
- f. In order to determine if the proposed monitoring well network shown in Figure 4-3 for the Southern ATUs is appropriate, extraction well locations, such as shown in Figure 2-4, need to be added to the map in Figure 4-3. Also include the outline of the chromium plume boundary as required by the WDRs.
- g. For all figures depicting particle tracks, please show the extraction well network assumed to be influencing particle track movement.

Water Board staff appreciates the efforts of PG&E in preparing the ROWD submittal. Please contact Lisa Dernbach at (530) 542-5424 with any questions.

**CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
LAHONTAN REGION**

BOARD ORDER NO. R6V-2014-0023

**WASTE DISCHARGE REQUIREMENTS
FOR
PACIFIC GAS AND ELECTRIC COMPANY
GROUNDWATER REMEDIATION PROJECT**

AGRICULTURAL TREATMENT UNITS

WDID NO. 6B361403002

San Bernardino County

The California Regional Water Quality Control Board, Lahontan Region (Water Board), finds:

1. Discharger

Pacific Gas and Electric Company (PG&E) is the owner and operator of the natural gas compressor station in Hinkley where hexavalent chromium was discharged from historical waste water releases to groundwater. For the purposes of this Order, PG&E is referred to as the "Discharger."

This Water Board Order (Order) supersedes and rescinds the previous Order No. R6V-2004-0034 and amendments, and Investigative Order R6V-2011-0078.

2. Groundwater Contamination

The compressor station began operating in 1952 and discharged untreated cooling tower water containing hexavalent chromium to unlined ponds until 1964. Wastewater then percolated through soil to the water table, approximately 80 feet below, creating a chromium plume in groundwater.

Since 1991, PG&E has implemented various interim remediation projects to clean up chromium in groundwater at different locations within and outside of the plume boundaries. In August 2010, PG&E submitted a Feasibility Study in compliance with Cleanup and Abatement Order (CAO) R6V-2008-0002, evaluating options for comprehensive (Project Area-wide) cleanup of groundwater to background concentrations of chromium.

11. Site Hydrogeology and Hydrology

The hydrogeology at the compressor station and northwards consists of an upper, unconfined aquifer and a lower, confined aquifer separated by a lacustrine clay that forms a regional aquitard. The hydrogeology in the northwestern Project area consists of just the upper, unconfined aquifer, as the lower aquifer and clay aquitard pinch out (terminate against the upward sloping bedrock). In general, groundwater flow at the compressor station is primarily to the northwest in the southern Project area and then north towards the Harper Dry Lake, with an average gradient of 0.004 feet per foot. Depth to groundwater in the Hinkley Valley ranges from 75 to 95 feet below ground surface.

The Mojave River is located approximately one mile south of the compressor station, in the southeast portion of the Project Area. Essentially all groundwater in the Hinkley Valley originates from the Mojave River while little to no groundwater originates from surrounding topographic high points, such as Mt. General. The chromium plume resides primarily in the floodplain-derived aquifer sediments originating from the Mojave River and extends north to the Harper Dry Lake Valley. Some of the northern plume fringes extend to alluvial sediments eroded from local mountains. The closest surface water is an unnamed ephemeral stream, located about 1,000 feet northeast of the plume's northern boundary.

12. Climate

The precipitation in the area is less than four inches annually. The evaporation rate is approximately 74 inches annually. Thus, essentially no local precipitation percolates to the groundwater, which is fed by the Mojave River from runoff originating in the San Bernardino Mountains. The area has hot summers and mild winters. Winds are pervasive in the high desert and typically occur during the afternoon.

13. Constituents of Concern

The discharge of extracted groundwater to agricultural treatment units contains waste chromium originating from the compressor station. Extracted groundwater also contains total dissolved solids, nitrate, naturally-occurring uranium and other radionuclides, and naturally-occurring dissolved metals, such as arsenic, manganese, and iron.

This Order authorizes the discharge of extracted groundwater to agricultural treatment units. Additionally, the use of well rehabilitation compounds, process chemicals and groundwater flow tracers is authorized by this Order. Specific chemicals or compounds are listed in Attachment E, WDRs Monitoring and Reporting Program for this Order. The Water Board's Executive Officer may amend the list to add chemicals or compounds for which the Discharger has provided the following documentation:

d. Basis for Monitoring Required by this Order

This Order authorizes discharges at agricultural treatment units in locations where hexavalent chromium in irrigation water may exceed historically applied values. Further, agricultural treatment may occur in areas co-located with existing in-situ treatment operations, where elevated concentrations of remediation byproducts such as iron, arsenic and manganese would be present. Therefore, this Order requires continued soil and plant tissue monitoring to verify hexavalent chromium removal efficiencies and investigate any accumulation of chromium and other constituents in soils and plants.

This Order also requires monitoring of uranium and other radionuclides to determine the potential for these constituents to be transported or mobilized due to pumping for remediation purposes. Uranium and other radionuclides are naturally-occurring in Mojave Desert soils and rocks, and are not present in the aquifer as a result of the Discharger's remedial actions or compressor station operations. As described in the EIR, an increase in bicarbonate concentrations in the soil zone or an increase in the rate of downward groundwater flow due to groundwater pumping for agricultural use could increase the mobilization of uranium. In addition, uranium and radionuclide levels are generally found to be higher in groundwater closer to bedrock strata since they originate in bedrock. As a result, uranium may be extracted and deposited in agricultural treatment unit soils. Therefore, monitoring of extracted groundwater for uranium and other radionuclides is needed to determine the potential for this to occur. This Order also requires baseline and twice-yearly sampling of soil, and yearly sampling of plant tissue to investigate the fate of uranium in those media. If statistically significant increases in soil uranium concentrations are detected, this Order requires the Discharger to submit an action plan to limit increases of uranium in soil.

Vadose zone sampling is not required by this Order, as monitoring data indicate that vadose zone samples have been well below compliance limits for the period of record (over seven years of sampling).

18. Applicability of Title 27 Requirements; Exemption

California Code of Regulations, title 27, Division 2, (Title 27) specifies regulatory and design criteria for discharges of solid wastes to land for treatment, storage, or disposal. Agricultural treatment units do not store solid waste, nor do they store wastewater, but they do function to treat wastewater, as described in Finding 16. Section 20090 of Title 27 specifies exemptions for discharges of wastewater to land if the following conditions are met:

1. The applicable Water Board has issued WDRs, reclamation requirements, or waived such issuance;
2. The discharge is in compliance with the applicable water quality control plan; and
3. The wastewater does not need to be managed according to Chapter 11, Division 4.5, title 22 of this code as a hazardous waste.

EDMUND G. BROWN JR.

MATTHEW RODRIGUEZ
SECRETARY FOR
ENVIRONMENTAL PROTECTION

Lahontan Regional Water Quality Control Board

July 18, 2014

Via email

Dear Mr. [REDACTED] Mrs. [REDACTED] and Mrs. [REDACTED]

I wanted to respond to your mid-June 2014 inquiries regarding application of the Maximum Contaminant Level (MCL) recently adopted by the California Department of Public Health (now known as the Division of Safe Drinking Water or DSDW) and continuation of the whole house replacement water program for the Hinkley Compressor Station Site Cleanup.

On July 1, 2014 the MCL, or drinking water standard, became effective for hexavalent chromium (chrome-6). California is the first state in the nation to establish a MCL specifically for chrome-6, which underscores the state's commitment to protecting drinking water. This new standard is one fifth the current total chromium standard of 50 parts per billion (ppb), which includes both trivalent chromium (chromium-3) and chrome-6. The federal MCL for total chromium is 100 ppb.

Because the MCL for chrome-6 is in effect, the Lahontan Regional Water Quality Control Board (Water Board) can no longer require replacement water for those domestic wells with levels of chrome-6 below 10 ppb. I realize this is frustrating because you believe the replacement water should be continued until the United States Geological Survey (USGS) background study is completed; unfortunately, we have to comply with existing law, and have no authority to continue requiring the current replacement water program.

Our legal counsel has previously explained that our ability to require Pacific Gas & Electric Company (PG&E) to provide replacement water is limited by a 2005 precedential decision issued by the State Water Board entitled "In the Matter of the Petition of Olin Corporation and Standard Fusee, Incorporated, Order WQ 2005-0007" (referred to as the "Olin Order"), which was discussed in depth in our Order R6V-2011-0005A1, requiring the issuance of whole house replacement water. In that Order, the State Water Board determined that for the purposes of determining whether a well is "affected" under Water Code section 13304, allowing the regional board to require the provision of replacement water, a well is only considered "affected" when the discharge causes the water to exceed a drinking water standard. The State Water Board concluded, "Any other approach would require regional water boards to make individual,

AMY L. HORNE PhD, CHAIR | PATTY Z. KOUYOUMDJIAN, EXECUTIVE OFFICER

2501 Lake Tahoe Blvd., So. Lake Tahoe, CA 96150 | www.waterboards.ca.gov/lahontan

The setting of the drinking water standard at 10 ppb does not, however, affect the Water Board's authority requiring cleanup. Under current Water Board orders, PG&E must continue to clean up the discharges from the compressor station site. The Water Board has the authority to require clean up to background levels in accordance with State Water Board Policy 92-49 and a new cleanup and abatement order will be updated with specific cleanup requirements and will be considered by the Water Board in 2015. In addition, the USGS background study will continue, and the results of that study will be incorporated into the Water Board's requirements, as necessary.

If you have any questions regarding this letter, please contact me at (530) 542-5412 or Lauri Kemper, Assistant Executive Officer, at (530) 542-5436.

October 9, 2014

PUBLIC REVIEW OPPORTUNITY

Implementation of Mitigation Measures Requiring Replacement Water for Impacts Due to Remedial Actions, Pacific Gas and Electric Company's Hinkley Groundwater Remediation Project

This letter requests your input on recent proposals from PG&E to carry out requirements called "mitigation measures" contained in the Regional Water Quality Control Board, Lahontan Region's (Water Board) Agricultural Treatment Unit Waste Discharge Requirements (ATU WDRs, Board Order No. R6V-2014-0023), adopted by the Water Board in March 2014. The ATU WDRs allow PG&E to construct and operate agricultural fields in the Hinkley area to treat extracted groundwater from the chromium plume. Mitigation measures in the ATU WDRs require PG&E to provide replacement water if water supply wells near ATUs experience increases in chromium or remediation byproducts, or decreases in groundwater levels due to remediation activities.

Background

The ATU WDRs contain requirements that PG&E establish "pre-remedial reference levels" of chromium, potential remediation byproducts (total dissolved solids, nitrate, uranium, arsenic, or manganese) and groundwater levels in water supply wells (domestic and agricultural wells) near ATUs in the Hinkley valley. To establish these reference levels, PG&E is required to sample supply wells in up to a one-mile area surrounding new and existing ATUs on at a quarterly basis (once every three months) for at least one year. These reference levels are needed to determine if any supply wells are affected by PG&E's remediation actions going forward. Data collected during the reference level sampling will be compared to future sampling that will be conducted as the remediation continues. If there are significant differences between a supply wells' reference level data and future measurements, replacement water may be required.

In various submittals, PG&E has proposed methods to evaluate the data to establish reference levels. Water Board staff are circulating PG&E's proposals for a 3-week public review and comment period. This letter provides a brief summary of the mitigation measures and PG&E's proposals, which are attached to this letter.

Mitigation measures WTR-MM-2a and -2b require that replacement water be provided for supply wells if PG&E's remediation activities cause increases of chromium or agricultural byproducts, and mitigation measure WTR-MM-2c addresses decreases in groundwater levels. Criteria are specified in the ATU WDRs to determine if supply wells are considered affected by remediation actions.

I. WTR-MM-2A AND 2B (CHROMIUM AND REMEDIATION BYPRODUCTS)

These mitigation measures address any future increases in chromium and remediation byproducts water supply wells due to PG&E's remediation actions. Remediation byproducts could include total dissolved solids, nitrate, uranium, manganese, or arsenic.

Summary of PG&E's WTR-MM-2a and 2b implementation proposal, dated August 14, 2014.

PG&E proposes to collect (or use existing data for chromium) consisting of four different seasonal data points (i.e., collected quarterly) within two years. **The reference level for each domestic well is proposed to be set at the maximum value of each constituent measured during the two years.** See Attachment 1 for PG&E's proposal.

II. WTR-MM-2C (GROUNDWATER DRAWDOWN)

This mitigation measure requires that PG&E measure water supply wells within one-half mile of ATUs to establish baseline water levels in the well, and to measure the screen length of the wells. The water level measuring would occur quarterly for at least one year; screen lengths would be measured once. Then as remediation actions continue, supply wells within one-quarter mile of ATUs are to be measured twice yearly, to determine if the wells' water levels have dropped significantly due to remediation.

Summary of PG&E's WTR-MM-2c implementation proposal (contained in the ATU Monitoring Report, Section 6.3 and Appendix F), dated August 20, 2014

PG&E reported it has visually surveyed nineteen of the twenty water supply wells in the pre-remedial reference sampling area where owner permission was granted. The surveys indicate that well modifications and service disruptions would be needed to measure water levels in the wells. For example, wells may need to be retrofitted to install a sampling pipe to insert a water level instrument, and the well pump would need to be turned off for a period of time (likely up to 48 hours) to allow the water levels to stabilize before measuring. See Attachment 2, Appendix F from PG&E's August 20, 2014 ATU monitoring report.

Because of these issues, **PG&E is proposing to measure water levels in nearby monitoring wells as substitutes for measuring levels in water supply wells.** The proposed substitute monitoring wells are generally within one-quarter mile of each water supply well, and are shown on Attachment 3.

III. HOW TO PROVIDE INPUT ON THESE PROPOSALS

If you have any comments or have questions regarding PG&E's proposals, please provide them to Water Board staff no later than **October 30, 2014**. You may mail comments to the address on this letterhead, email them to Anne.Holden@waterboards.ca.gov, or fax to (530) 544-2271. Please address all comments to the attention of Anne Holden.

We appreciate your ongoing interest in water quality issues in the Hinkley Valley. If you have any questions regarding this letter, please contact me at (530) 542-5436, or Anne Holden at 530-542-5450.

Comments on Implementation of Mitigation Measures WTR-MM-2A, WTR-MM-2B, and WTR-MM-2C, Pacific Gas and Electric Company Hinkley Compressor Station, San Bernardino County

In correspondence dated August 14, 2014 and a report dated August 20, 2014, PG&E staff proposed methods to analyze baseline data collected under the Agricultural Treatment Unit Waste Discharge Requirements (ATU WDRs, Board Order No. R6V-2014-0023). The ATU WDRs contain requirements to implement mitigation measures specified in the 2013 Environmental Impact Report (EIR), requiring PG&E to assess water quality and water levels in domestic wells near ATU fields to determine if ATU pumping is adversely impacting those wells. The assessment process involves establishing baseline levels of chromium, nitrate, total dissolved solids, uranium, and water levels in certain domestic wells. Future data will be compared against this baseline to determine if wells are potentially or actually affected by ATU groundwater extraction. Mitigation measures require replacement water for domestic wells affected by remediation pumping.

Water Board circulated PG&E's August 14 and August 20, 2014, proposals for a 21-day public review period. Comments were received on October 30, 2014, from the Independent Review Panel (IRP) Manager. This letter incorporates those comments, and the IRP Manager's letter is enclosed for reference.

Implementation of Mitigation Measures (MM) WTR-MM-2A and 2B

These two MMs address potential increases in chromium and remediation byproducts in domestic wells due to remedial activities. To establish baseline levels for each subject

AMY L. HORNE PH.D., CHAIR | PATTY Z. KOLOYOUNDJIAN, EXECUTIVE OFFICER

2501 Lake Tahoe Blvd., So. Lake Tahoe, CA 96150 | www.waterboards.ca.gov/lahontan

domestic well, PG&E proposed to use a minimum of four measurements collected quarterly within the past two years. The baseline would be established as the maximum value from the dataset.

Comments

1. Water Board staff has no objections to the proposed approach outlined above. The proposal is consistent with the MMs contained in the EIR, and is appropriate to determine baseline for the purpose of EIR MMs.
2. Water Board staff support the use of a larger dataset, if available for a given well. For example, if eight quarterly chromium data points from within the last two years are available for a well, PG&E should consider using that larger dataset to determine baseline.

Implementation of WTR-MM-2C

This MM addresses potential decreases in groundwater levels (drawdown) in domestic wells due to groundwater extraction for chromium treatment at ATUs. Data would be collected from water supply wells within one-half mile of ATUs to establish baseline water levels in the well, and to measure the screen length of the wells. The water level measuring would occur quarterly for at least one year; screen lengths would be measured once. Then as remedial actions continue, supply wells within one-quarter mile of ATUs are to be measured twice yearly, to determine if the wells' water levels have dropped significantly due to remediation.

PG&E reported it has visually surveyed nineteen of the twenty water supply wells in the pre-remedial reference sampling area where owner permission was granted. The surveys indicate that well modifications and service disruptions would be needed to measure water levels in the wells. For example, wells may need to be retrofitted to install a sampling pipe to insert a water level instrument, and the well pump would need to be turned off for a period of time (likely up to 48 hours) to allow the water levels to stabilize before measuring.

Because of these issues, PG&E instead proposes to measure water levels in nearby monitoring wells (MWs) as substitutes for measuring levels in water supply wells.

Comments

1. Water Board staff agrees that if measuring water levels and/or screen lengths in domestic wells is infeasible due to access or other issues, then the next best option is to use appropriately placed monitoring wells as substitutes for the actual domestic well.
2. Before approving the use of MWs, documentation must be provided that each well owner has either refused access, or does not wish to have their well retrofitted and/or have their well shut off for the length of time needed to establish water levels. If a well owner is not responsive to PG&E, please document contact attempts.

3. If residents agree to have their wells shut off to measure water levels, will replacement water be provided if needed; for example, if a storage tank is not available to store adequate water for the residents' use during shut off?
4. Figure 6-4 from the Second and Third Quarter 2014 ATU WDRs monitoring reports shows the proposed MWs to be used if domestic wells cannot be measured.
 - a. Please provide information on the screen depths and intervals of the proposed MWs and compare to the domestic well information to demonstrate that they are appropriate substitutes.
 - b. Please revise Figure 6-4 to show groundwater contours to demonstrate the MWs are appropriately located to act as substitute wells with regard to groundwater flow direction.
 - c. MWs intended to substitute for domestic wells 27-26, 23-07 and 25-14 do not appear to be located such that they will be effective at detecting changes due to remedial pumping. Please provide information (such as that required by comments 3a and b, above) to support their selection, or propose alternate MWs, or install piezometers.

We look forward to receiving the additional information on MM WTR-MM-2C. Please contact Anne Holden at (530) 542-5450 or Anne.Holden@waterboards.ca.gov with any questions.

Lauri Kemper, PE
Assistant Executive Officer
